## H556/01: Modelling physics

A Level

Mark Scheme for June 2022

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, Cambridge Nationals, Cambridge Technicals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by examiners. It does not indicate the details of the discussions which took place at an examiners' meeting before marking commenced.

All examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the report on the examination.

## RM ASSESSOR

1. Make sure that you have accessed and completed the relevant training packages for on-screen marking: RM Assessor Online Training; OCR Essential Guide to Marking.
2. Make sure that you have read and understood the mark scheme and the question paper for this unit. These are available in RM Assessor.
3. Log-in to RM Assessor and mark the required number of practice responses ("scripts") and the required number of standardisation responses.

## MARKING

1. Mark strictly to the mark scheme.
2. Marks awarded must relate directly to the marking criteria.
3. The schedule of dates is very important. It is essential that you meet the RM Assessor $50 \%$ and $100 \%$ deadlines. If you experience problems, you must contact your Team Leader (Supervisor) without delay.
4. If you are in any doubt about applying the mark scheme, consult your Team Leader via the RM Assessor messaging system in the first instance.
5. Crossed Out Responses

Where a candidate has crossed out a response and provided a clear alternative then the crossed out response is not marked. Where no alternative response has been provided, examiners may give candidates the benefit of the doubt and mark the crossed out response where legible.

## Multiple Choice Question Responses

When a multiple-choice question has only a single, correct response and a candidate provides two responses (even if one of these responses is correct), then no mark should be awarded (as it is not possible to determine which was the first response selected by the candidate).
When a question requires candidates to select more than one option/multiple options, then local marking arrangements need to ensure consistency of approach.

## Contradictory Responses

When a candidate provides contradictory responses, then no mark should be awarded, even if one of the answers is correct.
Short Answer Questions (requiring only a list by way of a response, usually worth only one mark per response)
Where candidates are required to provide a set number of short answer responses then only the set number of responses should be marked. The response space should be marked from left to right on each line and then line by line until the required number of responses have been considered. The remaining responses should not then be marked. Examiners will have to apply judgement as to whether a 'second response' on a line is a development of the 'first response', rather than a separate, discrete response. (The underlying assumption is that the candidate is attempting to hedge their bets and therefore getting undue benefit rather than engaging with the question and giving the most relevant/correct responses.)

## Short Answer Questions (requiring a more developed response, worth two or more marks)

If the candidates are required to provide a description of, say, three items or factors and four items or factors are provided, then mark on a similar basis - that is downwards (as it is unlikely in this situation that a candidate will provide more than one response in each section of the response space.)

Longer Answer Questions (requiring a developed response)
Where candidates have provided two (or more) responses to a medium or high tariff question which only required a single (developed) response and not crossed out the first response, then only the first response should be marked. Examiners will need to apply professional judgement as to whether the second (or a subsequent) response is a 'new start' or simply a poorly expressed continuation of the first response.
6. On each blank page the icon BP must be inserted to confirm that the page has been checked. For additional objects (if present), a tick must be inserted on each page to confirm that it has been checked.
Always check the pages (and additional objects if present) at the end of the response in case any answers have been continued there.
7. Award No Response (NR) if:

- there is nothing written in the answer space

Award Zero '0' if:

- anything is written in the answer space and is not worthy of credit (this includes text and symbols).

Team Leaders must confirm the correct use of the NR button with their markers before live marking commences and should check this when reviewing scripts.
8. The RM Assessor comments box is used by the Principal Examiner or your Team Leader to explain the marking of the practice responses. Please refer to these comments when checking your practice responses. Do not use the comments box for any other reason.

If you have any questions or comments for your team leader, use the RM Assessor messaging system.
9. Assistant Examiners will send a brief report on the performance of candidates to their Team Leader (Supervisor) via email by the end of the marking period. The report should contain notes on particular strengths displayed as well as common errors or weaknesses. Constructive criticism of the question paper/mark scheme is also appreciated.

## 10. Level of response (LoR)

Read through the whole answer from start to finish, concentrating on features that make it a stronger or weaker answer using the indicative scientific content as guidance. The indicative scientific content indicates the expected parameters for candidates' answers, but be prepared to recognise and credit unexpected approaches where they show relevance.

Using a 'best-fit' approach based on the science content of the answer, first decide which set of level descriptors, Level 1 (L1), Level 2 (L2) or Level 3 (L3), best describes the overall quality of the answer using the guidelines described in the level descriptors in the mark scheme.

Once the level is located, award the higher or lower mark.
The higher mark should be awarded where the level descriptor has been evidenced and all aspects of the communication statement (in italics) have been met. The lower mark should be awarded where the level descriptor has been evidenced but aspects of the communication statement (in italics) are missing.

In summary:

- the science content determines the level
- the communication statement determines the mark within a level.

Levels of response questions on this paper are $\mathbf{1 8 b}$ and $\mathbf{2 2 b}$.
11. Here are the subject specific instructions for this question paper.

## CATEGORISATION OF MARKS

The marking schemes categorise marks on the MACB scheme.

| $\mathbf{M}$ marks | These are method marks upon which A-marks (accuracy marks) later depend. For an M-mark to be scored, the point to which <br> it refers must be seen in the candidate's answers. If a candidate fails to score a particular M-mark, then none of the <br> dependent A-marks can be scored. |
| :--- | :--- |
| A marks | These are accuracy or answer marks, which either depend on an M-mark, or allow a C-mark to be scored. |
| $\mathbf{C}$ marks | These are compensatory method marks which can be scored even if the points to which they refer are not written down by the <br> candidate, providing subsequent working gives evidence that they must have known it. For example, if an equation carries a <br> C-mark and the candidate does not write down the actual equation but does correct working which shows the candidate knew <br> the equation, then the C-mark is given. |
| $\mathbf{B}$ marks | These are awarded as independent marks, which do not depend on other marks. For a B-mark to be scored, the point to <br> which it refers must be seen specifically in the candidate's answers. |

## SIGNIFICANT FIGURES

If the data given in a question is to 2 sf, then allow an answer to 2 or more significant figures.
If an answer is given to fewer than 2 sf , then penalise once only in the entire paper.
Any exception to this rule will be mentioned in the Guidance.
12. Annotations available in RM Assessor

| Annotation |  | Meaning |
| :---: | :---: | :---: |
| $\checkmark$ | Correct response | Used to indicate the point at which a mark has been awarded (one tick per mark awarded). |
| * | Incorrect response | Used to indicate an incorrect answer or a point where a mark is lost. |
| AE | Arithmetic error | Do not allow the mark where the error occurs. Then follow through the working/calculation giving full subsequent ECF if there are no further errors. |
| BOD | Benefit of doubt given | Used to indicate a mark awarded where the candidate provides an answer that is not totally satisfactory, but the examiner feels that sufficient work has been done. |
| BP | Blank page | Use BP on additional page(s) to show that there is no additional work provided by the candidates. |
| CON | Contradiction | No mark can be awarded if the candidate contradicts himself or herself in the same response. |
| ECF | Error carried forward | Used in numerical answers only, unless specified otherwise in the mark scheme. Answers to later sections of numerical questions may be awarded up to full credit provided they are consistent with earlier incorrect answers. Within a question, ECF can be given for AE, TE and POT errors but not for XP. |
| L1 | Level 1 | L 1 is used to show 2 marks awarded and $\mathrm{L}^{\wedge}$ is used to show 1 mark awarded. |
| L2 | Level 2 | L 2 is used to show 4 marks awarded and $\mathrm{L}^{\wedge}$ is used to show 3 marks awarded. |
| L3 | Level 3 | L 3 is used to show 6 marks awarded and $\mathrm{L} 3^{\wedge}$ is used to show 5 marks awarded. |
| POT | Power of 10 error | This is usually linked to conversion of SI prefixes. Do not allow the mark where the error occurs. Then follow through the working/calculation giving ECF for subsequent marks if there are no further errors. |
| SEEN | Seen | To indicate working/text has been seen by the examiner. |
| SF | Error in number of significant figures | Where more SFs are given than is justified by the question, do not penalise. Fewer significant figures than necessary will be considered within the mark scheme. Penalised only once in the paper. |
| TE | Transcription error | This error is when there is incorrect transcription of the correct data from the question, graphical read-off, formulae booklet or a previous answer. Do not allow the relevant mark and then follow through the working giving ECF for subsequent marks. |
| XP | Wrong physics or equation | Used in numerical answers only, unless otherwise specified in the mark scheme. Use of an incorrect equation is wrong physics even if it happens to lead to the correct answer. |

| $\boldsymbol{\wedge}$ | Omission | Used to indicate where more is needed for a mark to be awarded (what is written is not wrong but not <br> enough). |
| :---: | :--- | :--- |

Abbreviations, annotations and conventions used in the detailed Mark Scheme (to include abbreviations and subject-specific conventions).

| Annotation | Meaning |
| :---: | :--- |
| Reject | alternative and acceptable answers for the same marking point |
| Not | Answers which are not worthy of credit |
| Ignore | Statements which are irrelevant |
| Allow | Answers that can be accepted |
| () | Words which are not essential to gain credit |
| - | Underlined words must be present in answer to score a mark |
| ECF | Alternative wording |
| AW | Or reverse argument |
| ORA |  |

13. For answers marked by levels of response:
a. To determine the level - start at the highest level and work down until you reach the level that matches the answer
b. To determine the mark within the level, consider the following

| Descriptor | $\quad$ Award mark |
| :--- | :--- |
| On the borderline of this level and the one below | At bottom of level |
| Just enough achievement on balance for this level | Above bottom and either below middle or at middle of level (depending on number of marks <br> available) |
| Meets the criteria but with some slight <br> inconsistency | Above middle and either below top of level or at middle of level (depending on number of marks <br> available) |
| Consistently meets the criteria for this level | At top of level |

SECTION A

| Question | Answer | Marks |  |
| :---: | :--- | :---: | :---: |
| 1 | D | 1 |  |
| 2 | B | 1 |  |
| 3 | A | 1 |  |
| 4 | C | 1 |  |
| 5 | B | 1 |  |
| 6 | A | 1 |  |
| 7 | D | 1 |  |
| 8 | A | 1 |  |
| 9 | C | 1 |  |
| 10 | B | 1 |  |
| 11 | C | 1 |  |
| 12 | A | 1 |  |
| 13 | D | 1 |  |
| 14 | C | 1 |  |
| 15 | B | 1 |  |
|  |  | 15 |  |

## SECTION B

General rule: For substitution into an equation, allow any subject - unless stated otherwise in the guidance

| Question |  |  | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 16 | a |  | Hang (known) masses/weights on the cord or pull with a newtonmeter to different tensions <br> Determine the extension <br> Graph of force against extension <br> Force constant is the gradient (of force-extension graph) | B1 <br> B1 <br> B1 <br> B1 | Allow mention of spring <br> Allow measure the length <br> Allow length for extension <br> Note if axes swapped, must be $1 /$ gradient |
|  | b | i | Extension (from graph) is 6.0 (cm) <br> Use of $E=1 / 2 k x^{2}$ <br> elastic potential energy $=0.90(\mathrm{~J})$ | M1 <br> M1 <br> A1 | Allow Use of $E=1 / 2 F x$ and $F=k x$ <br> Allow 1 SF of 0.9 (J) |
|  |  | ii | $\begin{aligned} & \left(\mathrm{KE}=1 / 2 m v^{2}\right) \\ & 0.90=1 / 2 \times 0.030 \times v^{2} \\ & v=7.7\left(\mathrm{~m} \mathrm{~s}^{-1}\right) \end{aligned}$ | M1 <br> A1 | Allow 1 J instead of 0.90 J <br> Note using 1 J gives an answer of $8.2 \mathrm{~m} \mathrm{~s}^{-1}$ <br> Note allow possible ECF with energy approx 1 J |
|  |  | iii | $\begin{aligned} & 1.5=1 / 2 g t^{2} \\ & t=0.55(\mathrm{~s}) \\ & (R=7.7 \times 0.55) \\ & R=4.2(\mathrm{~m}) \end{aligned}$ | C1 <br> C1 <br> A1 | Allow $8 \mathrm{~m} \mathrm{~s}^{-1}$ or $8.2 \mathrm{~m} \mathrm{~s}^{-1}$ instead of $7.7 \mathrm{~m} \mathrm{~s}^{-1}$ i.e. 4.4, 4.5 (m) <br> Possible ECF from (b)(ii) |

| Question |  | Answer | Marks | Guidance |
| :---: | :---: | :--- | :--- | :--- | :--- |

| Question |  |  | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 18 | (a) | i | (area of shaded region =) $1.9 \times 6.0$ or $11.4\left(\mathrm{~m}^{2}\right)$ <br> (volume of air in $3.0 \mathrm{~s}=$ ) $11.4 \times 3.0 \times 12$ <br> (mass of air $=11.4 \times 3.0 \times 12 \times 1.2$ ) <br> mass of air $=492(.48)(\mathrm{kg})$ | C1 C1 <br> A1 | Allow volume found in one second leading to mass per second multiplied by 3 for $2^{\text {nd }}$ and $3^{\text {rd }}$ mark <br> Note: volume of air is $410\left(\mathrm{~m}^{3}\right)$ |
|  |  | ii | $\Delta p=12 \times 490$ or $5900\left(\mathrm{~kg} \mathrm{~m} \mathrm{~s}^{-1}\right)$ (force $=\Delta p / \Delta t=5900 / 3.0$ ) $F=2000$ | C1 A1 | Expect to see mass of 490, 492, 492.5, 492.48 <br> Note answer is 1970 to 3 SF using 492.48 Note answer is 1960 to 3 SF using 490 |

| Questi | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: |
| (b)* | Level 3 (5-6 marks) <br> Clear descriptions and explanations, supported by quantitative analysis <br> There is a well-developed line of reasoning which is clear and logically structured. The information presented is relevant and substantiated. <br> Level 2 (3-4 marks) <br> Some description and some explanation or quantitative analysis <br> or <br> Clear explanation <br> or <br> Clear description <br> or <br> Clear quantitative analysis <br> There is a line of reasoning presented with some structure. The information presented is in the most part relevant and supported by some evidence. <br> Level 1 (1-2 marks) <br> Limited description <br> or <br> Limited explanation <br> There is an attempt at a logical structure with a line of reasoning. The information is in the most part relevant. <br> 0 marks <br> No response or no response worthy of credit. | B1× 6 | Indicative scientific points may include: <br> Description <br> - Increasing the area/diameter of the guy ropes <br> - A different material with a larger breaking or yield stress <br> - A more streamlined shape that allows the wind to pass over or around the tent <br> Explanation <br> - Correct reference/use of $F=\Delta p / \Delta t$ <br> - Greater cross-sectional area of rope would reduce the stress <br> - The rope would not exceed a higher breaking/yield stress <br> - Changing shape produces a smaller momentum change and a smaller force <br> - If the air passes over/around the tent, it still has some forward momentum and hence the change and force is less <br> - Reduction of angle of ropes from ground reduces component of tension perpendicular to ground so tension decreases. <br> Quantitative analysis <br> - Mass (per unit time) and velocity both double (at $40 \mathrm{~m} / \mathrm{s}$ ) <br> - Momentum change is $x 4$ <br> - Force would increase by a factor of 4 <br> - Rope cross section must be $\times 4$ (or diameter $\times 2$ ) <br> - Breaking or yield stress of material would need to be $\times 4$ <br> - Use of trigonometry to determine the angle of deflection that would reduce the momentum change by a factor of 4 (about $15^{\circ}$ compared to the original $90^{\circ}$ ) |
|  | Total | 11 |  |

| Question |  |  | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 19 | a |  | Kinetic energy of particles is constant and the potential energy increases. <br> internal energy has increased (as the internal energy = $K E+P E)$ | B1 B1 | Allow internal energy of a gas is the kinetic energy of the particles <br> Allow potential energy of particles in a liquid is negative/the potential energy has increased to zero |
|  | b | i | $\begin{aligned} & p V=n R T \text { and } T=296(\mathrm{~K}) \\ & 100 \times 10^{3} \times 15=n \times 8.31 \times 296 \\ & n=610(\mathrm{~mol}) \end{aligned}$ | $\begin{aligned} & \mathrm{C} 1 \\ & \mathrm{C} 1 \\ & \mathrm{~A} 1 \end{aligned}$ | Note answer is 609.81559... <br> Allow 1 mark for 7850; 23 used instead of 300 K |
|  |  | ii | $($ mass $=610 \times 0.028)=17(\mathrm{~kg})$ | B1 | $\begin{aligned} & \text { Allow ecf from (b)(i) } \\ & \text { Expect } n=600,610,609(.8 \ldots) \end{aligned}$ |
|  |  | iii | Reduce the pressure or increase the temperature (at which it is added) | B1 |  |
|  |  | iv | The energy is transferred from the water vapour is equal to the energy gained by the liquid nitrogen $\begin{aligned} & L_{\mathrm{v}}=\frac{m_{\mathrm{H}_{2} \mathrm{O}} \times\left(L_{\text {fusion } \mathrm{H}_{2} \mathrm{O}}+L_{\text {evaporation } \mathrm{H}_{2} \mathrm{O}}\right)}{m_{N_{2}}} \\ & L_{\mathrm{v}}=\frac{1.3 \times(334000+2260000)}{17} \\ & L_{\mathrm{v}}=2.0 \times 10^{5}\left(\mathrm{~J} \mathrm{~kg}^{-1}\right) \end{aligned}$ | C1 <br> C1 <br> C1 <br> A1 | Allow use of only one of the specific latent heats of water at this stage e.g. $m_{N_{2}} \times L_{N_{2}}=m_{H_{2} O} \times L$ vaporisation $H_{H_{2} O}$ NOTE: this can be awarded across whole response Evidence of addition of both latent heats (of water) is required <br> Note answer is $1.97 \times 10^{5}$ to 3 SF <br> Note: 1 mark only for : <br> answer using only fusion $=2.5$ or $2.6 \times 10^{4}\left(\mathrm{~J} \mathrm{~kg}^{-1}\right)$ answer using only vaporisation $=1.7 \times 10^{5}\left(\mathrm{~J} \mathrm{~kg}^{-1}\right)$ |
|  |  |  | Total | 11 |  |

| Question |  |  |  | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 20 | a |  |  | $\omega \rightarrow \mathrm{S}^{-1}$ or $\omega^{2} \rightarrow \mathrm{~S}^{-2}$ <br> LHS $=\mathrm{m} \mathrm{s}^{-2}$ and RHS $=\mathrm{m} \mathrm{s}^{-2}$ clearly shown by unit algebra | M1 <br> A1 | Allow $\omega \rightarrow$ (radians) $\mathrm{s}^{-1}$ <br> Allow $\omega^{2}=(2 \pi f)^{2}$ or $(2 \pi / T)^{2}$ with some evidence of units afterwards $\text { e.g. } \mathrm{RHS}=\mathrm{m} \cdot\left(\mathrm{~s}^{-1}\right)^{2}$ |
|  | b | i |  | $\begin{aligned} & \Delta p=0.10 \times 1000 \times 9.81 \\ & \Delta p=980(\mathrm{~Pa}) \end{aligned}$ | $\begin{aligned} & \text { C1 } \\ & \text { A1 } \end{aligned}$ | Allow 1 mark for $490 \mathrm{~Pa} ; 5.0 \mathrm{~cm}$ used |
|  |  | ii | 1 | $\begin{aligned} & \omega^{2}=\frac{2 \rho g A}{m} \quad \text { or } \quad \omega^{2}=37.7\left(\mathrm{rad}^{2} \mathrm{~s}^{-1}\right) \\ & \omega=6.1 \\ & T=\frac{2 \pi}{6.1} \\ & T=1.02(\mathrm{~s}) \end{aligned}$ | C1 <br> C1 <br> C1 <br> AO | NOT $\omega=37.7$ <br> Alternative route: <br> - Substitution of expression for omega <br> - Re-arrangement to make T subject <br> - Evidence of evaluation to $\mathrm{T}=1.02$ (s) |
|  |  |  | 2 | Oscillation is isochronous starting from $(0,5)$ <br> Correct value(s) on the horizontal axis <br> At least 2 oscillations shown and amplitude is decreasing | $\begin{aligned} & \text { B1 } \\ & \text { B1 } \\ & \text { B1 } \end{aligned}$ | Period same by eye. <br> Note scale must be linear and increasing <br> Amplitude of 2nd oscillation smaller by eye. |
|  |  |  | 3 | The (driving) frequency is close to the natural frequency (of the system) / resonance will occur <br> (Level of) water will oscillate with large amplitude | B1 <br> B1 | Allow a description of consequence such as water leaving the tube or being unable to measure the height of liquid |
|  |  |  |  | Total | 12 |  |

| Question |  |  | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 21 | a |  | Gravitational force | B1 | Allow 'gravity' |
|  | b | i | $\begin{aligned} & \text { (diameter }=) 6.4 \times 3.1 \times 10^{16} \text { or } 2.0 \times 10^{17}(\mathrm{~m}) \\ & \\ & \text { (volume }=) 4 / 3 \pi \times\left(9.9 \times 10^{16}\right)^{3} \\ & \text { (volume }=\text { ) } 4.1 \times 10^{51}\left(\mathrm{~m}^{3}\right) \end{aligned}$ | $\begin{aligned} & \mathrm{C} 1 \\ & \mathrm{C} 1 \\ & \mathrm{AO} \end{aligned}$ | Allow (radius =) $3.2 \times 3.1 \times 10^{16}$ or $9.9 \times 10^{16}(\mathrm{~m})$ |
|  |  | ii | $\begin{aligned} & \left(E=\frac{3}{2} k T\right) \frac{3}{2} \times 1.38 \times 10^{-23} \times 250 \text { or } 5.2 \times 10^{-21}(\mathrm{~J}) \\ & (N=) 1.0 \times 10^{12} \times 4.1 \times 10^{51} \text { or } 4.1 \times 10^{63} \\ & \left(E_{\mathrm{k}}=4.1 \times 10^{63} \times 5.2 \times 10^{-21}\right) \\ & E_{\mathrm{k}}=2.1 \times 10^{43}(\mathrm{~J}) \end{aligned}$ | C1 <br> C1 <br> A1 |  |
|  | C | i | Mass is proportional to volume or diameter ${ }^{3}$ or radius ${ }^{3}$ or $\left(\frac{6.4}{3}\right)^{3}$ or $\left(\frac{3.2}{1.5}\right)^{3}$ $\text { ratio }=9.7$ | C1 A1 | Allow attempt at calculating volume of second nebula and comparing volumes directly <br> Allow 9.76 (if volume divided by volume of Sun's nebula) |
|  |  | ii | Fuel (hydrogen) runs out <br> Super red giant star <br> (Mass of core > Chandrasekhar limit /1.4 therefore) supernova <br> neutron star or black hole (formed) |  | Note: incorrect order is CON <br> Allow alternative route: <br> Red giant formed <br> (mass of star< 10 solar masses, therefore) planetary nebula <br> (and) white dwarf formed |
|  |  |  | Total | 12 |  |

| Question |  | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: | :---: |
| 22 | (a) | (\%) uncertainty of $T$ will be 4 times as significant as the uncertainty of $L$ <br> Should improve measurements leading to $T$ | M1 <br> A1 | Allow reference to $4^{\text {th }}$ power of $T$ Allow comparison of $\mathrm{L}^{(-) / 1 / 2}$ and $\mathrm{T}^{2}$ |
|  | (b)* | Level 3 (5-6 marks) <br> Clear description of method and analysis of data and correct explanation. <br> There is a well-developed line of reasoning which is clear and logically structured. The information presented is relevant and substantiated. <br> Level 2 (3-4 marks) <br> Some description of method and analysis of data or explanation. <br> There is a line of reasoning presented with some structure. The information presented is in the most part relevant and supported by some evidence. <br> Level 1 (1-2 marks) <br> Limited description <br> or <br> Limited analysis <br> or <br> Limited explanation <br> There is an attempt at a logical structure with a line of reasoning. The information is in the most part relevant. <br> 0 marks <br> No response or no response worthy of credit. | B1× 6 | Indicative scientific points may include: <br> Description of method <br> - Equation using lg of both sides <br> - Use of the $\lg X^{b}=b \lg X$ <br> - Comparison with $y=m x(+c)$ <br> - $\quad(y$-intercept $=0)$ <br> Analysis of data <br> - Straight line through the origin <br> - Gradient of the graph is $b$ <br> - Gradient calculated to be between 3 and 4 <br> Explanation <br> - Labelled sketch of HR diagram <br> - Reference to Stefan's Law <br> - Hotter stars (than the Sun) have greater luminosity (ratio) / luminosity ratio >1 <br> - Hotter stars have much smaller mass ratio than luminosity ratio <br> - Use of data (e.g luminosity of $\times 10,000$ means mass of about $\times 14$ ) <br> - therefore hotter stars lose mass at a much higher rate (compared to their mass) <br> - therefore hotter star lifespans are very much shorter than cooler stars |
|  |  | Total | 8 |  |

| Question |  |  | Answer | Marks | Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 23 | a |  | $\begin{aligned} & G \frac{M m}{r^{2}}=\frac{m v^{2}}{r} \quad \text { or } \quad G \frac{M m}{r^{2}}=m r \omega^{2} \\ & v=\frac{2 \pi r}{T} \quad \text { or } \quad \omega=\frac{2 \pi}{T} \end{aligned}$ <br> Substitution and manipulation to give $T^{2}=\frac{4 \pi^{2}}{G M} r^{3}$ (with $\frac{4 \pi^{2}}{G M}$ is constant) | M1 <br> M1 <br> A1 | Allow any subject |
|  | b | i | $\begin{aligned} & \left(\frac{168}{365}\right)^{2}=\left(\frac{r}{1.50 \times 10^{11}}\right)^{3} \\ & \text { distance }=8.9 \times 10^{10}(\mathrm{~m}) \end{aligned}$ | C1 <br> A1 | Ignore calculation of arithmetic mean of data in question Allow substitution into $T^{2}=\frac{4 \pi^{2}}{G M} r^{3}$ Ignore units for subs into Kepler's law <br> NOT 8.95 or $9(.0) \times 10^{10}(\mathrm{~m})$ (mean calculated) |
|  |  | ii | $\begin{aligned} & (\Delta \mathrm{GPE}=\Delta \mathrm{KE}) \\ & G M m\left(\frac{1}{4.20 \times 10^{10}}\right) \quad \text { or } \quad \operatorname{GMm}\left(\frac{1}{1.37 \times 10^{11}}\right) \\ & (\text { change in KE }=) \\ & 6.67 \times 10^{-11} \times 2.0 \times 10^{30} \times m\left(\frac{1}{4.20 \times 10^{10}}-\frac{1}{1.37 \times 10^{11}}\right) \\ & \text { change in kinetic energy }=4.6 \times 10^{11}(\mathrm{~J}) \end{aligned}$ | C1 <br> C1 <br> A1 | Allow this mark without the $m$ <br> Allow this mark without the $m$ <br> Allow 2 marks for $2.2 \times 10^{9} ; \Delta V$ calculated Ignore sign |
|  |  | iii | Description of reasonable effect of Earth has been ignored <br> work done by fuel (during lift off) <br> / <br> idea that atmosphere has been ignored previously | B1 |  |

## 바웅 CAMBRIDGE <br> unvurrtit press a smsssment

OCR is part of Cambridge University Press \& Assessment, a department of the University of Cambridge.
For staff training purposes and as part of our quality assurance programme your call may be recorded or monitored. © OCR 2022 Oxford Cambridge and RSA Examinations is a Company Limited by Guarantee. Registered in England. Registered office The Triangle Building, Shaftesbury Road, Cambridge, CB2 8EA.

Registered company number 3484466 . OCR is an exempt charity.
OCR operates academic and vocational qualifications regulated by Ofqual, Qualifications Wales and CCEA as listed in their qualifications registers including A Levels, GCSEs, Cambridge Technicals and Cambridge Nationals.

OCR provides resources to help you deliver our qualifications. These resources do not represent any particular teaching method we expect you to use. We update our resources regularly and aim to make sure content is accurate but please check the OCR website so that you have the most up-to-date version. OCR cannot be held responsible for any errors or omissions in these resources.

Though we make every effort to check our resources, there may be contradictions between published support and the specification, so it is important that you always use information in the latest specification. We indicate any specification changes within the document itself, change the version number and provide a summary of the changes. If you do notice a discrepancy between the specification and a resource, please contact us.

Whether you already offer OCR qualifications, are new to OCR or are thinking about switching, you can request more information using our Expression of Interest form.

Please get in touch if you want to discuss the accessibility of resources we offer to support you in delivering our qualifications.
