

GCSE GEOGRAPHY 8035/3

Paper 3 Geographical applications

Mark scheme

June 2024

Version: 1.0 Final

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts. Alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

No student should be disadvantaged on the basis of their gender identity and/or how they refer to the gender identity of others in their exam responses.

A consistent use of 'they/them' as a singular and pronouns beyond 'she/her' or 'he/him' will be credited in exam responses in line with existing mark scheme criteria.

Further copies of this mark scheme are available from aqa.org.uk

Point marked questions marking instructions

The mark scheme will state the correct answer or a range of possible answers, although these may not be exhaustive. It may indicate how a second mark is awarded for a second point or developed idea. It may give an indication of unacceptable answers.

One mark questions will not need ticks or crosses or NC (no credit). 2 and 3 mark questions will require ticks to show where credit is being awarded. The number of ticks must equal the mark awarded. You do not need to use crosses to indicate answers that are incorrect.

Level of response marking instructions

Level of response mark schemes are broken down into levels, each of which has a descriptor. The descriptor is linked to the Assessment Objective(s) being addressed. The descriptor for the level shows the average performance for the level.

Before you apply the mark scheme to a student's answer read through the answer and annotate it (as instructed) to show the qualities that are being looked for. You can then apply the mark scheme. You should read the whole answer before awarding marks on levels response questions.

All levels marked questions will have the level awarded at bottom left of response, which might be on an additional page. Creditworthy parts of an answer can (optionally) be highlighted.

Step 1 Determine a level

Descriptors for the level indicate the different qualities that might be seen in the student's answer for that level. When assigning a level you should look at the overall quality of the answer and not look to pick holes in small and specific parts of the answer where the student has not performed quite as well as the rest. If the answer covers different aspects of different levels of the mark scheme you should use a best fit approach for defining the level and then use the variability of the response to help decide the mark within the level, ie if the response is predominantly Level 2 with a small amount of Level 3 material it would be placed in Level 2 but be awarded a mark near the top of the level because of the Level 3 content. For instance, in a 9 mark question with three levels of response, an answer may demonstrate thorough knowledge and understanding (AO1 and AO2) but fail to respond to command words such as assess or evaluate (AO3). The script could still access Level 2 marks. Note that the mark scheme is not progressive in the sense that students don't have to fulfil all the requirements of Level 1 in order to access Level 2.

Step 2 Determine a mark

Once you have assigned a level you need to decide on the mark. The descriptors on how to allocate marks can help with this. The exemplar materials used during standardisation will also help. There will generally be an answer in the standardising materials which will correspond with each level of the mark scheme. This answer will have been awarded a mark by the Lead Examiner. You can compare the student's answer with the example to determine if it is the same standard, better or worse than the example. You can then use this to allocate a mark for the answer based on the Lead Examiner's mark on the example. You may well need to read back through the answer as you apply the mark scheme to clarify points and assure yourself that the level and the mark are appropriate.

Indicative content in the mark scheme is provided as a guide for examiners. It is not intended to be exhaustive and you must credit other valid points. Students do not have to cover all of the points mentioned in the indicative content to reach the highest level of the mark scheme.

An answer which contains nothing of relevance to the question must be awarded no marks.

Assessment of spelling, punctuation, grammar and use of specialist terminology (SPaG)

Accuracy of spelling, punctuation, grammar and the use of specialist terminology will be assessed via the indicated 9 mark questions. In each of these questions, three marks are allocated for SPaG as follows:

- **High performance** – 3 marks
- **Intermediate performance** – 2 marks
- **Threshold performance** – 1 mark

Responses with SPaG marks that gain a mark of 0 for the content/skills of the question can still be awarded SPaG marks if the response is judged to be a genuine attempt to answer the question.

General guidance

- Mark schemes should be applied positively. Examiners should look for qualities to reward rather than faults to penalise. They are looking to find credit in each response they mark. Unless the mark scheme specifically states, candidates must never lose marks for incorrect answers.
- The full range of marks should be used. Examiners should always award full marks if deserved, ie if the answer matches the mark scheme.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked unless the candidate has replaced it with an alternative response.
- Do NOT add ticks to level-marked questions – use the highlight tool/brackets to signify what is relevant.
- Sometimes there are specific “triggers” in the mark scheme that enable higher level marks to be awarded. For instance, an example or case study may be required for Level 3 if it is stated within the question.
- Where a source, such as a photograph or map, is provided as a stimulus it should be used if requested in the question, but credit can often be given for inferred as well as direct use of the source.
- Always be consistent – accept the guidelines given in the mark scheme and apply them to every script
- If necessary make comments to support the level awarded and to help clarify a decision you have made.
- Examiners should revisit standardised script answers as they apply the mark scheme in order to confirm that the level and the mark allocated is appropriate to the response provided.
- Mark all answers written on the examination paper.

Section A : Issue evaluation

Qu	Pt	Marking Guidance	Total marks												
01	1	<p>What was the difference between the National Housing Federation (NHF) housing demand figure of 340 000 homes and the actual new housing supply in 2018?</p> <p>C – 120 000</p> <p>AO4 – 1 mark</p>	1												
01	2	<p>Describe the relationship between average house prices and average household income in England (2019).</p> <p>1 mark – an understanding that the higher the income, the higher the house price.</p> <p>2nd mark – Identifies the general relationship and makes an additional specific point, anomalies, 5–8 ranking; rank order not totally the same; where house prices are very similar the ranking may be different; idea about multiples, ie houses in London are 50% more expensive (approx) than the South East while incomes are only 20% higher (approx). In general places with higher incomes have higher house prices (1);</p> <ul style="list-style-type: none"> • use of relative examples (d) • however, use of anomalies (d) • although the pattern is not even (East Midlands approx. 10x, London approx. 15x) (d) <p>AO4 – 2 marks</p>	2												
01	3	<p>Suggest how brownfield development could help to regenerate urban areas.</p> <table border="1"> <thead> <tr> <th>Level</th> <th>Marks</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>3 (Detailed)</td> <td>5–6</td> <td>AO3 – Demonstrates a detailed analytical understanding of brownfield areas and how their development might play a part in urban regeneration. Level	Marks	Description													
3 (Detailed)	5–6	AO3 – Demonstrates a detailed analytical understanding of brownfield areas and how their development might play a part in urban regeneration. AO3 – Detailed evaluative appreciation of how brownfield development might play a part in urban regeneration.													
2 (Clear)	3–4	AO3 – Demonstrates a clear analytical understanding of brownfield areas and how their development might help to improve urban areas. AO3 – Clear evaluation of how brownfield development might play a part in urban regeneration.													
1 (Basic)	1–2	AO3 – Demonstrates a basic analytical understanding of brownfield areas and how their development might create positive opportunities.													

		<table border="1"> <tr> <td></td> <td></td> <td>AO3 – Basic evaluation of how brownfield development might improve urban areas.</td> </tr> <tr> <td></td> <td>0</td> <td>No relevant content.</td> </tr> </table>			AO3 – Basic evaluation of how brownfield development might improve urban areas.		0	No relevant content.	
		AO3 – Basic evaluation of how brownfield development might improve urban areas.							
	0	No relevant content.							
		<ul style="list-style-type: none"> • Level 3 (detailed) – Shows a sound understanding of how brownfield development can help to regenerate urban areas by developing social and economic opportunities and improve the environment which will encourage people to live in the area and industry to locate there and consequently bring money into the area (appreciation of “cause-effect” and implied understanding of the multiplier effect). • Level 2 (clear) – Shows how brownfield development can improve urban areas and create a range of opportunities. Shows an understanding of how this links to regeneration. • Level 1 (basic) – Shows how brownfield development can change an area with simple points, for example; more jobs and money, making it look nicer. Largely descriptive with very limited understanding of regeneration. Points may be largely lifted from the resource. <p><u>Indicative content</u></p> <ul style="list-style-type: none"> • The resources include observations about the potential scale of some brownfield developments (a scheme of 5000 homes is mentioned). • It is clear that brownfield developments are often multi-use developments, with a focus on environmental improvement, which is much like many regeneration strategies. • Brownfield developments include housing, commercial activity, modern business and leisure activities, often attracting a younger, dynamic population, who will spend money locally. • Brownfield developments bring a significant number of people back into the area, to both live and work. • Areas that need regenerating often have social, economic and environmental challenges and brownfield development can address all of these issues. • Credit reference to urban greening initiatives. • Credit comparative statements relating to greenfield/ brownfield sites <p>AO3 – 6</p>							
01	4	<p>Give two ways urban sprawl can damage the environment.</p> <p>Any two reasonable points which might be direct (the building phase) or indirect (as a result of added use). Points might include:</p> <ul style="list-style-type: none"> • removal of vegetation/deforestation/loss of countryside or green space • change/damage to water courses • draining wetlands • destruction of habitats/loss of biodiversity • increased risk of flooding • traffic/water/air pollution/climate change 	2						

	<ul style="list-style-type: none"> • increasing waste issues. • destroys farmland <p>Pollution must be qualified.</p> <p>AO2 – 2 marks</p>	
--	--	--

01	5	<p>‘The housing challenge in England is not just about building more houses.’</p> <p>Use information from Figure 1 to discuss this statement.</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="text-align: center;">Level</th> <th style="text-align: center;">Marks</th> <th style="text-align: center;">Description</th> </tr> </thead> <tbody> <tr> <td style="text-align: center;">3 (Detailed)</td> <td style="text-align: center;">5–6</td> <td>AO3 – Uses resources in detail to consider how the housing challenge is a complex mix of factors. AO3 - Detailed evaluative appreciation of the complexity of the housing challenge in England.</td> </tr> <tr> <td style="text-align: center;">2 (Clear)</td> <td style="text-align: center;">3–4</td> <td>AO3 – Uses the resources to identify a number of issues associated with the housing challenge. AO3 – Clear evaluative appreciation of the complexity of the housing challenge in England</td> </tr> <tr> <td style="text-align: center;">1 (Basic)</td> <td style="text-align: center;">1–2</td> <td>AO3 – Uses the resources to identify and describe a limited number of factors associated with the housing challenge. AO3 – Basic appreciation that there may be housing issues beyond a simple lack of supply.</td> </tr> <tr> <td></td> <td style="text-align: center;">0</td> <td>No relevant content.</td> </tr> </tbody> </table> <ul style="list-style-type: none"> • Level 3 (detailed) – Identifies a range of points from the resources which illustrate the breadth of the housing challenge and uses this information to offer evaluative discussion about the factors involved in the issue. • Level 2 (clear) – Uses information from the resources to illustrate that the housing issue is about more than just supply and begins to offer an evaluative discussion about some of the factors involved in the issue. • Level 1 (basic) – Identifies information which suggests some awareness of why the housing issue is about more than just supply with limited evaluative reasoning. Points may be largely lifted from the resource. <p><u>Indicative content</u></p> <ul style="list-style-type: none"> • The balance between supply and demand is a significant issue, which is expressed by the differences in the three data sets (actual number of new builds; government target; National Housing Federation projected demand). • There are significant regional variations in relation to supply and demand, so there is a locational complexity, which can add to regional issues. • Housebuilding can stimulate demand and be a migratory factor. • There are issues of poor quality housing, which in some cases significantly affect quality of life. Consequently, additional new homes do not always add to the housing stock since they are simply replacing existing houses. 	Level	Marks	Description	3 (Detailed)	5–6	AO3 – Uses resources in detail to consider how the housing challenge is a complex mix of factors. AO3 - Detailed evaluative appreciation of the complexity of the housing challenge in England.	2 (Clear)	3–4	AO3 – Uses the resources to identify a number of issues associated with the housing challenge. AO3 – Clear evaluative appreciation of the complexity of the housing challenge in England	1 (Basic)	1–2	AO3 – Uses the resources to identify and describe a limited number of factors associated with the housing challenge. AO3 – Basic appreciation that there may be housing issues beyond a simple lack of supply.		0	No relevant content.	6

	<p>consider sustainability with limited understanding of the concept. A largely unsubstantiated judgement.</p> <p><u>Indicative content</u></p> <ul style="list-style-type: none"> • Sustainability can be considered in relation to the specific development and/or its place within the wider community. • The concept of a “sustainable settlement” is defined in the resources in terms of Social, Economic and Environmental impacts. (It is not necessary to include reference to all elements of sustainability). • The developers and supporters of the project identify a number of factors which they consider to be “sustainable”, including the overall idea of the development being a self-sustained community. In addition there are points about renewable energy, environmental protection, local employment, community facilities and “sustainable transport systems”. • The Local Authority support some of these claims but also consider that the development will create additional traffic pressures and also identify the distinction between planning and potential realities (the development has a “low energy vision” and “modern waste collection facilities are being considered”). • Those opposed to the development identify a number of factors which might make the development less sustainable, including; increased traffic, risks of flooding, increased commuting, supplying and managing utilities. • Broader aspects are also considered, including; impacts on local business, environmental pressures (with the High Weald nearby), added pressure on existing services. • Those opposed to the development also identify the fact that many of the planned services will not be available until a proportion of the houses have been built and this will add to traffic issues and put additional pressure on local services. • There is a broader point about housing supply, with a view that the development will draw in population rather than satisfy local demand. <p>AO3 –6, AO4 –3</p>
