

A1 – Proof Questions	
AQA, Edexcel, OCR	

1) Prove that there is an infinite amount of prime numbers. [4]

[4]

2) For all real numbers if x^3 is rational, then x is also rational. True or false?

3)

The graph is given by function $kx^2 + 6kx + 5$ where *k* is constant. Prove that $0 \le k \le \frac{5}{6}$ [4]

- 4) Prove that $\sqrt{2}$ is irrational. [4]
- 5) If $a, b \in \mathbb{Z}$, then $a^2 4b 3 \neq 0$. [4]
- 6) Using proof by contradiction show that there are no positive integer solutions to the [4] Diophantine equation $x^2 - y^2 = 10$.
- 7) If *a* is a rational number and *b* is an irrational number, then *a* + *b* is an irrational number. [3]
 Demonstrate, using proof, why the above statement is correct.
- 8) Prove that triangle ABC can have no more than one right angle. [2]
- 9) Prove that the product of sum of three consecutive integers is divisible by 3. [2]
- 10) The number of even integers is limitless. Prove or disprove this statement. [3]
- 11) Suppose $a \in \mathbb{Z}$ If a^2 is even, then *a* is even. [2]

12) Prove that
$$\frac{d}{dx} \left(3^{\frac{1}{2}}x + \pi \right)$$
 is irrational. [5]
