## GCE Examinations

## Advanced Subsidiary

## Core Mathematics C1

## Paper K

Time: 1 hour 30 minutes

## Instructions and Information

Candidates may NOT use a calculator in this paper
Full marks may be obtained for answers to ALL questions.
Mathematical formulae and statistical tables are available.
This paper has ten questions.

## Advice to Candidates

You must show sufficient working to make your methods clear to an examiner. Answers without working may gain no credit.

1. Find the value of $y$ such that

$$
\begin{equation*}
4^{y+3}=8 \tag{3}
\end{equation*}
$$

2. Find

$$
\begin{equation*}
\int\left(3 x^{2}+\frac{1}{2 x^{2}}\right) \mathrm{d} x . \tag{4}
\end{equation*}
$$

3. 

Figure 1
Figure 1 shows the rectangles $A B C D$ and $E F G H$ which are similar.
Given that $A B=(3-\sqrt{5}) \mathrm{cm}, A D=\sqrt{5} \mathrm{~cm}$ and $E F=(1+\sqrt{5}) \mathrm{cm}$, find the length $E H$ in cm, giving your answer in the form $a+b \sqrt{5}$ where $a$ and $b$ are integers.
4. (a) Sketch on the same diagram the curves $y=x^{2}-4 x$ and $y=-\frac{1}{x}$.
(b) State, with a reason, the number of real solutions to the equation

$$
\begin{equation*}
x^{2}-4 x+\frac{1}{x}=0 . \tag{2}
\end{equation*}
$$

5. (a) By completing the square, find in terms of the constant $k$ the roots of the equation

$$
\begin{equation*}
x^{2}+2 k x+4=0 . \tag{4}
\end{equation*}
$$

(b) Hence find the exact roots of the equation

$$
\begin{equation*}
x^{2}+6 x+4=0 \tag{2}
\end{equation*}
$$

6. (a) Evaluate

$$
\begin{equation*}
\sum_{r=1}^{50}(80-3 r) . \tag{3}
\end{equation*}
$$

(b) Show that

$$
\sum_{r=1}^{n} \frac{r+3}{2}=k n(n+7)
$$

where $k$ is a rational constant to be found.
7. Solve the simultaneous equations

$$
\begin{align*}
& x-3 y+7=0 \\
& x^{2}+2 x y-y^{2}=7 \tag{7}
\end{align*}
$$

8. Given that

$$
\frac{\mathrm{d} y}{\mathrm{~d} x}=\frac{x^{3}-4}{x^{3}}, x \neq 0,
$$

(a) find $\frac{\mathrm{d}^{2} y}{\mathrm{~d} x^{2}}$.

Given also that $y=0$ when $x=-1$,
(b) find the value of $y$ when $x=2$.
9. A curve has the equation $y=(\sqrt{x}-3)^{2}, x \geq 0$.
(a) Show that $\frac{\mathrm{d} y}{\mathrm{~d} x}=1-\frac{3}{\sqrt{x}}$.

The point $P$ on the curve has $x$-coordinate 4 .
(b) Find an equation for the normal to the curve at $P$ in the form $y=m x+c$.
(c) Show that the normal to the curve at $P$ does not intersect the curve again.
10. The straight line $l$ has gradient 3 and passes through the point $A(-6,4)$.
(a) Find an equation for $l$ in the form $y=m x+c$.

The straight line $m$ has the equation $x-7 y+14=0$.
Given that $m$ crosses the $y$-axis at the point $B$ and intersects $l$ at the point $C$,
(b) find the coordinates of $B$ and $C$,
(c) show that $\angle B A C=90^{\circ}$,
(d) find the area of triangle $A B C$.

## END
