Paper B

MARKING GUIDE

This guide is intended to be as helpful as possible to teachers by providing concise solutions and indicating how marks should be awarded. There are obviously alternative methods that would also gain full marks.

Method marks (M) are awarded for knowing and using a method.

Accuracy marks (A) can only be awarded when a correct method has been used.

(B) marks are independent of method marks.

FP3 Paper B – Marking Guide

1. $\ln(1+ax) \times (1+bx)^{-1} = (ax - \frac{1}{2}a^2x^2 + \dots)(1 - bx + \dots)$ B1
 $= ax - abx^2 - \frac{1}{2}a^2x^2 + \dots$ M1 A1
 $\therefore ax + (-ab - \frac{1}{2}a^2)x^2 = 3x + \frac{3}{2}x^2$
 $\therefore a = 3 \text{ and } -ab - \frac{1}{2}a^2 = \frac{3}{2}$ M1
giving $-3b - \frac{9}{2} = \frac{3}{2}$ so $a = 3, b = -2$ A1 (5)

3. (a) $\cosh ix = \frac{1}{2}(e^{ix} + e^{-ix}) = \frac{1}{2}[\cos x + i\sin x + \cos(-x) + i\sin(-x)]$ M1
 $= \frac{1}{2}[\cos x + i\sin x + \cos x - i\sin x] = \cos x$ A1
(b) $\cosh ix = e^{ix}$ $\therefore \cos x = \cos x + i\sin x$ M1
 $\therefore \sin x = 0$ giving $x = 0, \pi$ M1 A1 (5)

4. assume true for $n = k$ and $n = k + 1$ $\therefore u_k = 2^k, u_{k+1} = 2^{k+1}$ M1
 $\therefore u_{k+2} = 5(2^{k+1}) - 6(2^k)$ M1
 $= 10(2^k) - 6(2^k) = 4(2^k) = 2^{k+2}$ M1 A1
 \therefore true for $n = k + 2$ if true for $n = k$ and $n = k + 1$
if $n = 1, u_1 = 2^1 = 2$; if $n = 2, u_2 = 2^2 = 4$ \therefore true for $n = 1$ and $n = 2$ B1
 \therefore by induction true for integer $n, n \geq 1$ A1 (6)

5. (a) $\lambda = -1$, $\begin{vmatrix} 2 & 2 & -1 \\ 0 & 2 & -4 \\ x & 3 & 0 \end{vmatrix} = 0$ M1

$$\therefore 2(0+12) - 2(0+4x) - 1(0-2x) = 0 \quad \text{M1}$$

$$24 - 8x + 2x = 0 \text{ so } x = 4 \quad \text{A1}$$

(b) $\begin{vmatrix} 1-\lambda & 2 & -1 \\ 0 & 1-\lambda & -4 \\ 4 & 3 & -1-\lambda \end{vmatrix} = 0$ M1

$$(1-\lambda)[(1-\lambda)(-1-\lambda)+12] - 2(0+16) - 1[0-4(1-\lambda)] = 0 \quad \text{A1}$$

$$-(1+\lambda)(1-\lambda)^2 + 12 - 12\lambda - 32 + 4 - 4\lambda = 0 \quad \text{M1}$$

$$-(1+\lambda)(1-\lambda)^2 - 16\lambda - 16 = 0$$

$$(1+\lambda)(1-\lambda)^2 + 16(1+\lambda) = 0$$

$$(1+\lambda)[(1-\lambda)^2 + 16] = 0 \quad \text{A1}$$

$$\lambda = -1; \text{ or } (1-\lambda)^2 = -16, \text{ not poss. for real } \lambda \quad \text{M1}$$

$\therefore \lambda = -1$ is only real eigenvalue A1

(c) $\begin{pmatrix} 2 & 2 & -1 \\ 0 & 2 & -4 \\ 4 & 3 & 0 \end{pmatrix} \begin{pmatrix} x \\ y \\ z \end{pmatrix} = \begin{pmatrix} 0 \\ 0 \\ 0 \end{pmatrix}$

$$2x + 2y - z = 0 \quad \therefore 2x + 4z - z = 0 \quad \text{M1 A1} \quad \text{(11)}$$

$$2y - 4z = 0 \quad 2x + 3z = 0 \quad \therefore \text{eigenvector } k \begin{pmatrix} -3 \\ 4 \\ 2 \end{pmatrix}$$

$$\therefore y = 2z \quad \therefore 2x = -3z$$

6. (a) $\frac{y_1 - y_0}{0.1} \approx x_0 y_0 \quad \therefore y_1 \approx 0.1 x_0 y_0 + y_0$ M1 A1

$$x_0 = 0.2, x_1 = 0.3, y_0 = 1 \quad \therefore y_1 \approx 1.02 \quad \text{M1 A1}$$

$$y_2 \approx 0.1 x_1 y_1 + y_1 \quad \text{M1}$$

$$x_1 = 0.3, x_2 = 0.4, y_1 = 1.02 \quad \therefore y_2 \approx 1.0506 \quad \text{A1}$$

(b) $\int_1^y \frac{1}{y} dy = \int_{0.2}^{0.4} x dx \quad \text{M1}$

$$[\ln|y|]_1^y = [\frac{1}{2}x^2]_{0.2}^{0.4} \quad \text{A1}$$

$$\ln|y| - \ln 1 = 0.08 - 0.02 \text{ giving } y = e^{0.06} \quad \text{M1 A1}$$

(c) % error = $\frac{e^{0.06} - 1.0506}{e^{0.06}} \times 100\% = 1.1\% \text{ (1dp)}$ M1 A1 **(12)**

7. (a)
$$\begin{aligned} z^n + \frac{1}{z^n} &= \cos n\theta + i\sin n\theta + \cos(-n\theta) + i\sin(-n\theta) && \text{M1} \\ &= \cos n\theta + i\sin n\theta + \cos n\theta - i\sin n\theta = 2\cos n\theta && \text{A1} \\ z^n - \frac{1}{z^n} &= \cos n\theta + i\sin n\theta - \cos n\theta + i\sin n\theta = 2i\sin n\theta && \text{A1} \end{aligned}$$

(b)
$$\begin{aligned} (z + \frac{1}{z})^4 &= z^4 + 4z^3 \frac{1}{z} + 6z^2 \frac{1}{z^2} + 4z \frac{1}{z^3} + \frac{1}{z^4} && \text{M1} \\ (2\cos \theta)^4 &= 2\cos 4\theta + 4(2\cos 2\theta) + 6 && \text{M1 A1} \\ 16\cos^4 \theta &= 2\cos 4\theta + 8\cos 2\theta + 6 && \text{A1} \\ (z - \frac{1}{z})^4 &= z^4 - 4z^2 + 6 - \frac{4}{z^2} + \frac{1}{z^4} && \text{M1} \\ (2i\sin \theta)^4 &= 2\cos 4\theta - 8\cos 2\theta + 6 && \text{A1} \\ 16\sin^4 \theta &= 2\cos 4\theta - 8\cos 2\theta + 6 && \text{A1} \\ \therefore 16(\cos^4 \theta + \sin^4 \theta) &= 4\cos 4\theta + 12 && \text{M1} \\ \cos^4 \theta + \sin^4 \theta &= \frac{1}{4}\cos 4\theta + \frac{3}{4} \text{ so } A = \frac{1}{4}, B = \frac{3}{4} && \text{A1} \end{aligned}$$

(c)
$$\begin{aligned} I &= \int_0^{\frac{\pi}{8}} \frac{1}{4}\cos 4\theta + \frac{3}{4} d\theta && \\ &= [\frac{1}{16}\sin 4\theta + \frac{3}{4}\theta]_0^{\frac{\pi}{8}} && \text{M1 A1} \\ &= \frac{1}{16} + \frac{3}{32}\pi && \text{A1} \end{aligned} \quad \text{(14)}$$

8. (a) $\overrightarrow{AB} = -5\mathbf{i} + \mathbf{j} - 3\mathbf{k}, \overrightarrow{AC} = -2\mathbf{i} + 3\mathbf{j} + 4\mathbf{k}$ M1 A1

$$\overrightarrow{AB} \times \overrightarrow{AC} = \begin{vmatrix} \mathbf{i} & \mathbf{j} & \mathbf{k} \\ -5 & 1 & -3 \\ -2 & 3 & 4 \end{vmatrix}$$

$$= \mathbf{i}(4+9) - \mathbf{j}(-20-6) + \mathbf{k}(-15+2) = 13\mathbf{i} + 26\mathbf{j} - 13\mathbf{k}$$
 M1 A2

(b) $\overrightarrow{AD} = -4\mathbf{i} - 4\mathbf{j} + 6\mathbf{k}$ B1
 $\text{volume} = \frac{1}{6} |(13\mathbf{i} + 26\mathbf{j} - 13\mathbf{k}).(-4\mathbf{i} - 4\mathbf{j} + 6\mathbf{k})|$ M1
 $= \frac{13}{6} |-4 - 8 - 6| = 39 \text{ units}^3$ A1

(c) $\mathbf{n} = \mathbf{i} + 2\mathbf{j} - \mathbf{k}$ B1
 $\mathbf{r} \cdot \mathbf{n} = (3\mathbf{i} - \mathbf{j} + 2\mathbf{k}) \cdot (\mathbf{i} + 2\mathbf{j} - \mathbf{k}) = 3 - 2 - 2 = -1$ M1
 $\therefore \text{eqn. is } \mathbf{r} \cdot (\mathbf{i} + 2\mathbf{j} - \mathbf{k}) = -1$ A1

(d) line through DE has eqn. $\mathbf{r} = -\mathbf{i} - 5\mathbf{j} + 8\mathbf{k} + \lambda(\mathbf{i} + 2\mathbf{j} - \mathbf{k})$ M1 A1
at intersection $[(-1 + \lambda)\mathbf{i} + (-5 + 2\lambda)\mathbf{j} + (8 - \lambda)\mathbf{k}] \cdot (\mathbf{i} + 2\mathbf{j} - \mathbf{k}) = -1$ M1
 $-1 + \lambda - 10 + 4\lambda - 8 + \lambda = -1$ giving $\lambda = 3$ M1 A1
 $\therefore E$ is $(2, 1, 5)$ A1
