## Paper A

## MARKING GUIDE

This guide is intended to be as helpful as possible to teachers by providing concise solutions and indicating how marks should be awarded. There are obviously alternative methods that would also gain full marks.

Method marks (M) are awarded for knowing and using a method.
Accuracy marks (A) can only be awarded when a correct method has been used.
(B) marks are independent of method marks.

## M3 Paper A - Marking Guide

1. (a) $T=\frac{\lambda x}{l}=\frac{30 \times 0.2}{1}=6 \mathrm{~N}$

M1 A1
(b)

resolve $\nearrow: T-m g \sin \alpha=m a$

4
$\therefore 6-0.6 \times 9.8 \times \frac{3}{5}=0.6 a$
giving $a=4.12 \mathrm{~ms}^{-2}$
M1
A1
2. (a) $F=m a=0.5 v \frac{\mathrm{~d} v}{\mathrm{~d} x}=3 x^{\frac{1}{2}}$
$\therefore \int v \mathrm{~d} v=\int 6 x^{\frac{1}{2}} \mathrm{~d} x$ M1
giving $\frac{1}{2} v^{2}=4 x^{\frac{3}{2}}+c$
A1
$x=1, v=2 \quad \therefore c=-2$
M1
$\therefore v^{2}=8 x^{\frac{3}{2}}-4$
A1
(b) $\quad x=4$ gives $v^{2}=64-4=60 \quad \therefore v=\sqrt{ } 60=7.7 \mathrm{~ms}^{-1}(1 \mathrm{dp})$

M1 A1
3. (a) amplitude $=\frac{1}{2} \times 8=4 \mathrm{~m}$
period $=\frac{2 \pi}{\omega}=12 \therefore \omega=\frac{\pi}{6}$
B1
$v_{\max }=a \omega=4 \times \frac{\pi}{6}=\frac{2 \pi}{3} \mathrm{~ms}^{-1}$
M1 A1
(b) $x=a \sin \omega t$

M1
at $P,{ }^{-} 1=4 \sin \omega t \therefore \frac{\pi}{6} t={ }^{-} 0.2527, t={ }^{-} 0.4826$
M1 A1
at $Q, 2=4 \sin \omega t \therefore \frac{\pi}{6} t=\frac{\pi}{6}, t=1$
$\therefore$ time between $=1.48 \mathrm{~s}(3 \mathrm{sf})$
M1 A1
A1
4. (a) $v^{2}=k g-k g e^{-\frac{2 x}{k}} \therefore 2 v \frac{\mathrm{~d} v}{\mathrm{~d} x}=2 g e^{-\frac{2 x}{k}}$

M1 A2
$f=$ accel. $=v \frac{\mathrm{~d} v}{\mathrm{~d} x}=g e^{-\frac{2 x}{k}}$
A1
(b) when $x$ is large, $e^{-\frac{2 x}{k}} \rightarrow 0$
$\therefore 49^{2}=k g$ giving $k=\frac{49^{2}}{9.8}=245$ M1
(c) $v^{2}=k g-k g e^{-\frac{2 x}{k}}=k g-k f$ M1 A1
$\therefore f=g-\frac{1}{k} v^{2}=9.8-\frac{1}{245} v^{2}$ M1 A1 M1 A1
5. (a)

| portion | mass | $y$ | $m y$ |
| :---: | :---: | :---: | :---: |
| cone | $\rho \times \frac{1}{3} \pi r^{2}(2 r)=\frac{2}{3} \rho \pi r^{3}$ | $h+\frac{1}{4}(2 r)=h+\frac{1}{2} r$ | $\frac{2}{3} \rho \pi r^{3}\left(h+\frac{1}{2} r\right)$ |
| cylinder | $\rho \pi r^{2} h$ | $\frac{1}{2} h$ | $\frac{1}{2} \rho \pi r^{2} h^{2}$ |
| firework | $\rho \pi r^{2}\left(h+\frac{2}{3} r\right)$ | $\bar{y}$ | $\rho \pi r^{2}\left(\frac{1}{2} h^{2}+\frac{2}{3} r h+\frac{1}{3} r^{2}\right)$ |

$\rho=$ mass per unit volume $\quad y$ coords. taken vert. from base
$\rho \pi r^{2}\left(h+\frac{2}{3} r\right) \times \bar{y}=\rho \pi r^{2}\left(\frac{1}{2} h^{2}+\frac{2}{3} r h+\frac{1}{3} r^{2}\right)$
$\therefore 2(3 h+2 r) \times \bar{y}=3 h^{2}+4 r h+2 r^{2}$
giving $\bar{y}=\frac{3 h^{2}+4 h r+2 r^{2}}{2(3 h+2 r)}$
(b)

$$
\begin{array}{ll}
h=4 r \therefore \bar{y}=\frac{33}{14} r & \text { M1 } \\
\tan \alpha=r \div\left(\frac{33}{14} r\right)=\frac{14}{33} & \text { M1 } \\
\therefore \alpha=23^{\circ} \text { (nearest degree) } & \text { A1 }
\end{array}
$$

6. (a) string taut $\therefore P R=a, P R^{2}+Q R^{2}=a^{2}+3 a^{2}=4 a^{2}=P Q^{2}$
by converse of Pythag. $\angle P R Q=90^{\circ}$
(b) $\sin \angle P Q R=\frac{a}{2 a}=\frac{1}{2} \quad \therefore \angle P Q R=30^{\circ}$
(c)

resolve $\uparrow: T_{1} \sin 60-m g=0$

$$
\therefore T_{1}=\frac{2 m g}{\sqrt{3}}\left(\text { or } \frac{2}{3} \sqrt{3} m g\right)
$$

(ii) resolve $\leftarrow: T_{2}+T_{1} \cos 60=\frac{m \nu^{2}}{r}$

$$
\therefore T_{2}=\frac{m u^{2}}{a}-\frac{1}{2} \times \frac{2 m g}{\sqrt{3}}=\frac{m u^{2}}{a}-\frac{m g}{\sqrt{3}}\left(\text { or } \frac{m u^{2}}{a}-\frac{1}{3} \sqrt{3} m g\right)
$$

M1 A1
(d) $\quad P R$ taut $\therefore T_{2} \geq 0$
giving $\frac{m u^{2}}{a} \geq \frac{m g}{\sqrt{3}}$ so $u^{2} \geq \frac{g a}{\sqrt{3}}$
7. (a)

resolve $\uparrow: R-m g=0 \quad \therefore R=2 g$
M1 A1
friction $=\mu R=\frac{10}{49} \times 2 \times 9.8=4$
A1
work-energy:
work done $=$ loss of $\mathrm{KE}-$ gain of EPE $\quad$ M1
$\therefore F s=\frac{1}{2} m u^{2}-\frac{\lambda x^{2}}{2 l}$
so $4 d=\frac{1}{2} \times 2 \times 5^{2}-\frac{50(d-1)^{2}}{2 \times 1}$
A1
$\therefore 4 d=25-25\left(d^{2}-2 d+1\right)$
M1
giving $25 d^{2}-46 d=0, d(25 d-46)=0$
M1
$\therefore d=0$ (initially) or $\frac{46}{25}=1.84 \mathrm{~m}$
(b) work-energy: work done $=$ loss of EPE - gain of KE
$\therefore 4 \times \frac{46}{25}=\frac{50 \times\left(\frac{21}{25}\right)^{2}}{2 \times 1}-\frac{1}{2} \times 2 \times v^{2}$
M1 A1
giving $21^{2}=(4 \times 46)+25 v^{2}$
M1
so $v^{2}=\frac{257}{25} \quad \therefore v=3.2 \mathrm{~ms}^{-1}(2 \mathrm{sf})$
A1
(14)
