## Guidance

1. Read each question carefully.
2. Don't spend too long on each question.
3. Attempt every question.
4. Always show your workings.

Revise GCSE Maths: www.MathsMadeEasy.co.uk/gcse-maths-revision/

Visit http://www.mathsmadeeasy.co.uk/ for more fantastic resources.

1. Measure and write down the values of the angles below.

Is $A B$ a straight line? Give your reasoning.

Angles on a straight line have to add up to $181^{\circ}$, so this is not a straight line.

$$
\text { (2 marks, } 1 \text { mark) }
$$

2. In each case below, give your reasoning.

Find $x$.
Angles on a straight line add up to $180^{\circ}$

$$
x=180^{\circ}-105^{\circ}=75^{\circ}
$$

Find $y$.
Angles in a triangle add up to $180^{\circ}$
$y=180-75^{\circ}-35^{\circ}=70^{\circ}$

Visit http://www.mathsmadeeasy.co.uk/ for more fantastic resources.
3. In each case below, give your reasoning.

Find $x$.
Opposite angles are equal

$$
x=150^{\circ}
$$

Find $y$.

Angles in a quadrilateral add up to $360^{\circ}$

$$
y=360^{\circ}-30^{\circ}-140^{\circ}-150^{\circ}=40^{\circ}
$$

Visit http://www.mathsmadeeasy.co.uk/ for more fantastic resources.
4. Given that all external angles of the pentagon are equal, is it regular? You must explain your answer.
The diagram is not drawn to scale.

$$
72^{\circ} \times 5=360^{\circ}
$$

All external angles have to add up to $360^{\circ}$, so must be regular.
Alternatively, all internal angles are $180^{\circ}-72^{\circ}=108^{\circ}$
Internal angles of a pentagon are $108^{\circ}$, so must be regular.

Visit http://www.mathsmadeeasy.co.uk/ for more fantastic resources.
5. HLKJ is part of a regular hexagon, and MKJ is part of a regular octagon. Calculate the value of the angle LKM.

Angles in a regular hexagon are $120^{\circ}$ each.
Angle $L K J=120^{\circ}$
Angles in a regular octagon are $135^{\circ}$ each.

$$
\text { Angle } M K J=135^{\circ}
$$

Angles around a point have to add up to $360^{\circ}$, so the missing angle must be

$$
\text { angle }=360^{\circ}-120^{\circ}-135^{\circ}=105^{\circ}
$$

Visit http://www.mathsmadeeasy.co.uk/ for more fantastic resources.
6. Given the $63^{\circ}$ angle below, write down the values of the following angles and give your reasoning for each.

A:
$63^{\circ}$ because opposite angles are equal.

B:

$$
180^{\circ}-63^{\circ}=117^{\circ} \text { interior angles add up to } 180^{\circ}
$$

C:
$63^{\circ}$ because corresponding angles are equal. (Corresponding to $63^{\circ}$ )
D:
$63^{\circ}$ because opposite angles are equal. (Opposite C)

Visit http://www.mathsmadeeasy.co.uk/ for more fantastic resources.
7. On the diagram below, mark the following angles:

- A pair of alternate angles with the letter A
- A pair of corresponding angles with the letter B
- Two vertically opposite angles with the letter C
- Two angles that are not directly related with the letter D
