## Instructions

- Use black ink or ball-point pen.
- Fill in the boxes at the top of this page with your name, centre number and candidate number.
- Answer all questions.
- Answer the questions in the spaces provided

   there may be more space than you need.
- You must show all your working.
- Diagrams are NOT accurately drawn, unless otherwise indicated.
- Calculators may not be used.

### Information

- The total mark for this paper is 80
- The marks for each question are shown in brackets
   use this as a guide as to how much time to spend on each question.

#### Advice

- Read each question carefully before you start to answer it.
- Keep an eye on the time.
- Try to answer every question.
- Check your answers if you have time at the end.

2 Kiaria is 7 years older than Jay. Martha is twice as old as Kiaria. The sum of their three ages is 77

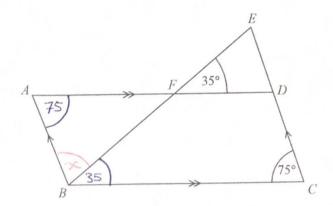

Find the ratio of Jay's age to Kiaria's age to Martha's age.

$$K = 3+7$$
 $M = 2K$ 

$$M = 2(21) = 42$$

4 The diagram shows a logo made from three circles.

Each circle has centre O.

Daisy says that exactly  $\frac{1}{3}$  of the logo is shaded.

Area = TTr

Is Daisy correct?

You must show all your working.

Total Area =

5 The table shows information about the weekly earnings of 20 people who work in a shop.

Weekly earnings (£x)	Frequency
$150 < x \le 250$	1
$250 < x \leqslant 350$	11
$350 < x \le 450$	5
$450 < x \le 550$	0
$550 < x \le 650$	3

(a) Work out an estimate for the mean of the weekly earnings.

$$f_{DC} = 1 \times 200$$
,  $11 \times 300$ ,  $5 \times 400$ 

$$\frac{\sum f \propto}{\sum f} = \frac{7300}{20} = 365$$

Nadiya says,

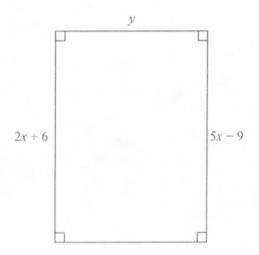

"The mean may not be the best average to use to represent this information."

(b) Do you agree with Nadiya? You must justify your answer.

Yes as outliers will affect the mean value

James and Peter cycled along the same 50 km route. James took  $2\frac{1}{2}$  hours to cycle the 50 km.

Peter started to cycle 5 minutes after James started to cycle. Peter caught up with James when they had both cycled 15 km.

James and Peter both cycled at constant speeds.

Work out Peter's speed.

J time @ 15 km =

13 A factory makes 450 pies every day. The pies are chicken pies or steak pies.

Each day Milo takes a sample of 15 pies to check.

The proportion of the pies in his sample that are chicken is the same as the proportion of the pies made that day that are chicken.

On Monday Milo calculated that he needed exactly 4 chicken pies in his sample.

(a) Work out the total number of chicken pies that were made on Monday.

(2)

On Tuesday, the number of steak pies Milo needs in his sample is 6 correct to the nearest whole number.

Milo takes at random a pie from the 450 pies made on Tuesday.

(b) Work out the lower bound of the probability that the pie is a steak pie.

$$\frac{5}{15}$$
