## Mark scheme

June 2017

Version: 1.0 Final

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts. Alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Assessment Writer.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this mark scheme are available from aqa.org.uk

### No Method Shown

Where the question specifically requires a particular method to be used, we must usually see evidence of use of this method for any marks to be awarded.

Where the answer can be reasonably obtained without showing working and it is very unlikely that the correct answer can be obtained by using an incorrect method, the principal examiner may suggest that we award **full marks**. However, the obvious penalty to candidates showing no working is that incorrect answers, however close, earn **no marks**.

Where a question asks the candidate to state or write down a result, no method need be shown for full marks.

Otherwise we require evidence of a correct method for any marks to be awarded.

Q1	Solution	Mark	Total	Comment	
	NO MISREADS ALLO	OWED IN	THIS Q	UESTION	
(a)	$\frac{1+4\sqrt{7}}{5+2\sqrt{7}} \times \frac{5-2\sqrt{7}}{5-2\sqrt{7}}$	M1			
	(Numerator = ) $5 + 20\sqrt{7} - 2\sqrt{7} - 56$	A1		at least this far	
	(Denominator = $25 + 10\sqrt{7} - 10\sqrt{7} - 28$ ) = -3	B1		must be seen as denominator	
	$Value = \frac{-51 + 18\sqrt{7}}{-3}$	A 1 000	Λ		
	$= 17 - 6\sqrt{7}$	AICSO	4	condone $-6\sqrt{7} + 17$	
(b)	$x\left(9\sqrt{5} - "their"6\sqrt{5}\right) = "their"4\sqrt{5}$	M1		attempt to write each term as $k\sqrt{5}$ with either $2\sqrt{45} = 6\sqrt{5}$ or $\sqrt{80} = 4\sqrt{5}$	
	$x\left(9\sqrt{5}-6\sqrt{5}\right) = 4\sqrt{5}$	A1		<b>OE</b> must have equation	
	$x = \frac{4}{3}$ or $x = 1\frac{1}{3}$ or $x = 1.3$	A1	3	must be simplified to one of these	
	Total		7		
(a)	Condone multiplication by $5-2\sqrt{7}$ instead of $\times \frac{5-2\sqrt{7}}{5-2\sqrt{7}}$ for <b>M1 only if</b> subsequent working shows multiplication by both numerator and denominator – otherwise <b>M0</b> For first <b>A1</b> each term must be evaluated correctly but may be seen in a grid An error in the denominator such as $25+5\sqrt{7}-5\sqrt{7}-28=-3$ should be given <b>B0</b> and it would then automatically lose the final <b>A1cso</b> May use $\frac{1+4\sqrt{7}}{5+2\sqrt{7}} \times \frac{2\sqrt{7}-5}{2\sqrt{7}-5}$ <b>M1</b> ; numerator $= -5-20\sqrt{7}+2\sqrt{7}+56$ <b>A1</b> etc <b>Alternative:</b> $\frac{1+4\sqrt{7}}{5+2\sqrt{7}} = m+n\sqrt{7}$ leading to $5m+14n=1$ ; $2m+5n=4$ <b>M1</b> (one correct) <b>A1</b> (both correct) either $m=17$ or $n=-6$ <b>A1</b> ; <b>answer</b> $= 17-6\sqrt{7}$ <b>A1 cso</b> (expression must be explicitly seen)				
(b)	Alternative 1 Multiply or divide each term by $\sqrt{5}$ obtaining 3 integer terms (possibly with one error) M1 3 correct integer terms; eg $x(45-30) = 20$ A1 : $x = \frac{4}{5}$ A1				
	Alternative 2 $x = \frac{\sqrt{80}}{9\sqrt{5} - 2\sqrt{45}} \times \frac{9\sqrt{5} + 2}{9\sqrt{5} + 2}$	$\sqrt{45}$ M1	$=\frac{300}{225}$ O	<b>E</b> A1(integer/integer) $=\frac{4}{3}$ A1	
	Squaring: Do not allow final A1 unless just	tification	for rejecti	ng negative value	
	May earn M1 for $x^2 (k\sqrt{5})^2 = 80$ and A1 for	or $x^2 = \frac{16}{9}$	OE		

Q2	Solution	Mark	Total	Comment	
(a)	$\left(\frac{dy}{dx}\right) = 20 - 2x - 6x^2$	M1 A1		two terms correct all correct	
	(10-6x)(2+x) (=0) <b>OE</b>	A1		correct factors or correct use of formula	
	5			by $-1$ or divided by $\pm 2$	
	(other stationary point when) $x = \frac{3}{3}$	A1cso	4	<b>OE eg</b> $\frac{20}{12}$ , $1\frac{2}{3}$ , 1.6 but not $\frac{-20}{-12}$	
(b)	$\left(\frac{\mathrm{d}^2 y}{\mathrm{d} x^2}\right) - 2 - 12x$	B1			
	$\left( \text{ when } x = -2, \frac{d^2 y}{dx^2} \right) = (-2 + 24) = 22$	B1ft		Sub $x = -2$ into their $\frac{d^2 y}{dx^2}$ and evaluate	
				correctly	
	22 > 0 therefore <b>minimum</b> (point)	E1ft	3	<b>FT</b> their value of $\frac{d^2 y}{dx^2}$ but must have	
				reason	
(c)	Cubic graph <b>through origin</b> with one max & one min on either side of <i>y</i> -axis	M1		may be reflection of given graph in <i>x</i> -axis for <b>M1</b>	
		A1	2	Graph roughly as shown in all 4 quadrants	
	Total		9		
(a)	If candidate multiplies by -1 before differentiating and writes $\frac{dy}{dx} = 6x^2 + 2x - 20$ this scores <b>M0</b>				
	$2 \pm 22 \qquad -1 \pm 11$				
	Second A1 is earned for formula as far as $-12$ or $-6$ etc				
	If both values given $x = -2$ , $\frac{5}{3}$ then allow A1cso				
	Withhold <b>A1cso</b> if no "=0" seen or incorrect equating of expressions.				
(b)	Allow <b>E1ft</b> for "their $-2+24 > 0$ so min" etc or				
	$\frac{d^2 y}{dx^2}$ >0 (provided they have a value earlier) $\Rightarrow$ minimum etc				
(c)	Allow <b>M1</b> if the curve does not actually cross the <i>x</i> -axis 3 times For <b>A1</b> ignore any "numbers" on graph				

Q3	Solution	Mark	Total	Comment	
(a)	$(-2)^{3} + b(-2)^{2} + c(-2) + 24$ -8+4b-2c+24=0 2b-c+8=0	M1 A1	2	clear attempt at p(-2) <b>AG</b> must see powers of -2 simplified correctly and = 0 appearing before last line	
(b)	$3^{3} + 3^{2}b + 3c + 24 = -30$ 27 + 9b + 3c + 24 = -30 3b + c + 27 = 0	M1 A1	2	clear attempt at p(3) <b>and</b> = -30 <b>ACF</b> terms need not be collected but powers of 3 must be evaluated <b>No ISW -</b> mark their final equation	
(c)	Correctly eliminating b or c from 2b-c+8=0 and an equation from (b) b=-7 or $c=-6b=-7$ and $c=-6$	M1 A1 A1	3	PI by one correct answer	
	Total		7		
(a) (b)	<ul> <li>Condone poor use of brackets if recovered on next line for both M1 and A1 Note that "= 0" must appear before last line; Example p(-2) = -8+4b-2c+24 ⇒ 2b-c+8=0 scores M1 A0 M1 may also be earned for a full long division attempt by (x+2) as far as the remainder in terms of b and c. M1 also for p(x) = (x+2)(x<sup>2</sup> + dx+12) b = 2+d; c = 2d+12 with A1 for completion. Terms must be exactly as printed answer but accept 0=2b-c+8 for A1.</li> <li>Do NOT treat use of 30 instead of -30 as a misread. M1 may also be earned for a full long division attempt by (x-3) as far as the remainder and equating the remainder (in terms of b and c) to -30.</li> </ul>				
	Ignore trailing equals sign for AI in both pa	rts ( <b>a</b> ) and	1 ( <b>b</b> ).		

Q4	Solution	Mark	Total	Comment		
	-6-5 56		Total	11		
(a)	grad $AB = \frac{3}{8-2}$ or $\frac{3}{-2-8}$	MI		correct unsimplified; <b>PI</b> by $-\frac{11}{10}$		
	$=-\frac{11}{10}$	A1				
	$y-5 = "their" - \frac{11}{10}(x-2)$ or $y6 = "their" - \frac{11}{10}(x-8)$	M1		ft "their gradient" but must use A or B coordinates correctly		
	11x + 10y = 28	A1	4	one side and integer on other side		
(b)	$(\operatorname{grad} AC =)\frac{k-4}{k+2}$ or $(\operatorname{grad} BC =)\frac{k+7}{k-8}$	B1		correct simplified expression eg $\frac{4-k}{-2-k}$		
	$\frac{k-4}{k+2} \times \frac{k+7}{k-8} = -1  \mathbf{OE}$	M1		condone one error in one term		
	$k^{2} + 3k - 28 = -k^{2} + 6k + 16$ $\Rightarrow 2k^{2} - 3k - 44 \ (=0)$	A1				
	(k+4)(2k-11) (=0)	dM1		attempt at factorisation or correct use of		
	$k = -4,  k = 5\frac{1}{2}$ <b>OE</b>	A1	5	formula for "their" quadratic		
	Total		0			
	Total		9			
(a)	<b>a)</b> May earn second <b>M1</b> for $y = "their" - \frac{11}{10}x + c$ and attempt to find c using $x = -2$ , $y = 5$ or $x = 8$ , $y = -6$ For <b>A1</b> , condone any equivalent equation of the correct form such as $28 = 10y + 11x$ or $-22x - 20y = -56$ but <b>not</b> $11x + 10y - 28 = 0$ or any equation with non-integer coefficients					
(b)	(b) Alternative $ AC^2 =  (k-4)^2 + (k+2)^2$ or $ BC^2 =  (k-8)^2 + (k+7)^2$ B1 (may be under square root)					
	Pythagoras $(k-4)^2 + (k+2)^2 + (k-8)^2 + (k+7)^2 = 10^2 + 11^2$ M1 (condone one error in one term)					
	$k^{2} - 8k + 16 + k^{2} + 4k + 4 + k^{2} - 16k + 64 + k^{2} + 14k + 49 = 221 \implies 4k^{2} - 6k - 88 = 0$ A1 etc					
	Allow <b>dM1</b> for factors that would multiply out to give their $k^2$ and constant terms.					
	To earn <b>dM1</b> using formula then it must be	correct fo	r "their" c	quadratic and discriminant evaluated		
	"correctly"; if correct quadratic used, you must see $\frac{3 \pm \sqrt{361}}{4}$ OE to award <b>dM1</b>					
			·			

Q5	Solution	Mark	Total	Comment		
(a)	$\left(\frac{\mathrm{d}y}{\mathrm{d}x}\right) = 8x^3 - 9x^2$	M1		one term correct		
	(dx)	A1		$\frac{dy}{dx}$ correct		
	$\left(\frac{dy}{dx} = 8(-1)^3 - 9(-1)^2\right) = -17$	dM1		correct substitution of $x = -1$ and correct evaluation for "their" $\frac{dy}{dx}$		
	(Grad of normal =) $\frac{1}{17}$	A1ft		<b>FT</b> their negative reciprocal provided <b>M1</b> is earned		
	$y = \frac{1}{17}x + 9\frac{1}{17}$	A1	5	or $y = \frac{1}{17}x + \frac{154}{17}$ equation must be in this form		
(b)(i)	$\frac{2}{5}x^5 - \frac{3}{4}x^4 + 4x$	M1 A1		two terms correct all correct (may have +c)		
	$\left[\frac{2}{5} \times 2^{5} - \frac{3}{4} \times 2^{4} + 4 \times 2\right] - \left[\frac{2}{5} \times (-1)^{5} - \frac{3}{4} \times (-1)^{4} + 4 \times (-1)\right]$	dM1		correct substitution of 2 and $-1$ to find "their" $F(2) - F(-1)$		
	$\left\lfloor \frac{2 \times 32}{5} - \frac{3 \times 16}{4} + 8 \right\rfloor - \left\lfloor -\frac{2}{5} - \frac{3}{4} - 4 \right\rfloor$	A1		<b>correct</b> with powers of 2 and (-1) and minus signs handled correctly		
	$= 13\frac{19}{20}$ or 13.95 or $\frac{279}{20}$	A1	5	correct single equivalent fraction or decimal		
(ii)	Area of trapezium = $\frac{1}{2}(9+12) \times 3$					
	$= 31.5 \text{ or } \frac{63}{2} \text{ OE}$	<b>B</b> 1		or $\int_{-1}^{2} (x+10) dx = 31.5$		
	"their" trapezium – answer from (b)(i)	M1		must be trapezium		
	(Area of shaded region =) $31.5 - 13.95$			11 251		
	= 17.55	A1	3	<b>OE</b> $17\frac{11}{20}, \frac{331}{20}$		
	Total		13			
(a)	Do <b>not</b> accept $y = \frac{1}{17}x + c$ , $c = \frac{154}{17}$ for final <b>A1</b> ; equation must be written in full on one line.					
(►)(3)	Allow $y = \frac{x}{17} + \frac{154}{17}$ for final <b>A1 but not</b> $y = \frac{x+154}{17}$ .					
(1)(a)	Use of $F(-1) - F(2)$ scores <b>dM0</b>					
(ii)	For M1 condone use of their"(b)(i) – "their" trapezium". Be generous in awarding this M1 provided you are convinced they are considering the area of a trapezium.					

Q6	Solution	Mark	Total	Comment		
(a)	$(x+10)^2 + (y-7)^2 = \dots$	M1		one of these terms correct		
		A1		LHS correct ignoring any extra constants		
			•	or $(x10)^2 + (y - 7)^2 = \dots$		
	$(x+10)^2 + (y-7)^2 = 10^2$ (or=100)	AI	3	or $(x10)^2 + (y - 7)^2 = 10^2$ (or=100)		
(b)	$10^2 + (y - 7)^2 = 10^2$	M1		putting $x=0$ in "their" equation		
	$\Rightarrow (y-7)^2 = 0 \Rightarrow y = 7$		-	and attempt to solve for y		
	Repeated root means circle touches <i>y</i> -axis	<b>E1</b>		completely correct working and <b>both</b>		
	1			parts of the conclusion		
	$(x+10)^2 + 7^2 = 100$	M1	-	putting $y = 0$ in "their" equation		
	$(x+10)^2 = 51  \Rightarrow x = -10 \pm \sqrt{51}  \int$			and attempt to solve for <i>x</i>		
	Two roots so circle crosses <i>x</i> -axis twice	<b>E</b> 1	4	completely correct working and <b>both</b>		
				parts of the conclusion		
(c)(i)	$(x+10)^2 + (kx-5)^2 = 100$	M1		sub $y = kx + 2$ into "their" circle equation		
	$x^{2} + 20x + 100 + k^{2}x^{2} - 10kx + 25 = 100$			and attempt to multiply out brackets		
	$(1+k^2)x^2 + 10(2-k)x + 25 = 0$	A1cso	2	AG be convinced -		
	must have terms exactly as printed answer			condone $0 = (1 + k^2)x^2 + 10(2 - k)x + 25$		
(11)		2/1				
(11)	$10^2(2-k)^2 - 4 \times 25(1+k^2)$	MI		correct discriminant unsimplified		
	$400 - 400k + 100k^2 - 100 - 100k^2 (= 0)$	AI		multiplying out correctly		
	$k = \frac{3}{4}$	A1cso	3	must see "=0" before final answer		
	4					
	Total		12			
(1.)						
(d)	<b>b)</b> May have "their" $y^2 - 14y + 49 = 0$ and <i>attempt at</i> formula or discriminant for first <b>M1</b>					
	with <b>E1</b> awarded for being <i>completely correct</i> with <b>both parts of conclusion</b> such as "only one value of $y / root/$ solution so touches $y_{-}axis$ " or "discriminant = 0 therefore repeated root so touches $y_{-}axis$ "					
	Second M1 can be earned for "their" $x^2 + 2$	0x + 49 =	0 and <i>at</i>	<i>tempt at</i> formula or discriminant with		
	E1 awarded for being <i>completely correct</i> with	ith <i>both po</i>	urts of con	<i>nclusion</i> such as "two (different) values of		
	x / roots/ solutions so crosses  x-axis in two places"					
	<b>May use geometry</b> : award first <b>M1</b> for stating x-coord of centre = "their" $-10$ and radius = "their" 10: then					
	E1 for both stating that <i>lengths are equal</i> hence circle touches y-axis (or y-axis is a tangent to the circle)					
	Second M1 for stating y-coord of centre = "their" 7 and radius = "their" 10; E1 for both explaining that					
	$y_c < r$ and concluding statement that the circle crosses x-axis at two distinct points. To award each of these <b>F1</b> marks all working must be correct					
(c)(i)	Penalise trailing equals signs and any incorrect algebra even if recovered awarding A0cso					
	All terms must be exactly as in the printed answer but "0=" may be on the LHS for Alcso.					
	May use $x^2 + (kx+2)^2 + 20x - 14(kx+2) + 49 = 0$ and attempt to multiply out brackets for <b>M1</b> giving					
	$x^{2} + k^{2}x^{2} + 4kx + 4 + 20x - 14kx - 28 + 49 = 0$ leading to $(1 + k^{2})x^{2} + 10(2 - k)x + 25 = 0$ for A1cso					
(ii)	Movements $10^2(2-1)^2 + 25(1+1^2)$		m 1 11	$L^2$ 1 $L^2$ for A1		
(")	May write $10^2(2-k)^2 = 4 \times 25(1+k^2)$ for <b>M1</b> then $4-4k+k^2 = 1+k^2$ for <b>A1</b> Correct discriminant appearing within the quadratic equation formula can carp <b>M1</b>					
	Correct discriminant appearing wrunn the quadratic equation formula can carriering.					

Q7	Solution	Mark	Total	Comment	
(a) (i)	x + x + (x + y) + (x + y) = 15 OE	M1		<b>ACF</b> eg $2x + 2(x + y) = 15$	
	$y = \frac{1}{2}(15 - 4x)$ <b>OE</b>	A1	2		
(ii)	$\begin{bmatrix} S = \end{bmatrix} (x+y)^2 - y^2 \qquad \mathbf{OE}$	M1		$[S = ]x^2 + 2xy$ or $x(x + y) + xy$ etc	
	$= x^{2} + x(15 - 4x)$ - 15x - 3x <sup>2</sup>	dM1		Sub their <i>y</i> into correct <i>S</i> expression

(ii)	(Max $S =$ ) $3 \times$ " <i>their</i> " $p$ (must be > 0)	M1		<b>or</b> $3(5 \times "their" q - "their" q^2)$	
	= 18.75	A1	2	<b>OE</b> eg $\frac{75}{4}$	
				withhold A1 if 2 marks not scored in (b)(i)	
	Total		9		
(a)(i)	Penalise candidates who are clearly working back from printed answer in part (a)(ii)				
(ii)	Only allow <b>dM1</b> if "their y" is of the form $a + bx$ ;				
	expression need not be simplified so $S = (x + 1.5 - 2x)^2 - (7.5 - 2x)^2$ , for example, earns <b>dM1</b> .				
	Allow omission of " $S =$ " on final line provided it appears on an earlier line with "=" on all subsequent lines.				
(b)(i)	(i) Example 1 $-(x-2.5)^2 + \frac{25}{4}$ scores M1 A1 (and ISW any incorrect rearrangement)				
	<b>Example 2</b> $-(x-2.5)^2 - \frac{25}{16}$ scores <b>M1 A0</b>				
	Alternative for M1: $x^2 - 5x = (x - 2.5)^2 - 2.5^2$ but must have both sides of this identity				
	If <b>M0</b> is scored then award <b>SC B1</b> for $6.25 - (x - 2.5)$ or $6.25 - (2.5 - x)^2$				
(ii)	Allow SC B1 if 18.75 is clearly obtained via	a different	iation or	NMS	

Q8	Solution	Mark	Total	Comment	
(a)	$\left(\frac{\mathrm{d}h}{\mathrm{d}t}\right) = 12t^2 - 59t + 72 \qquad \mathbf{OE}$	M1 A1		two terms correct (may have $x$ for $t$ ) all correct – must have $t$	
	$t = 3 \Longrightarrow \left(\frac{\mathrm{d}h}{\mathrm{d}t}\right) = 12 \times 3^2 - 59 \times 3 + 72$	dM1		substituting $t = 3$ into their $\frac{dh}{dt}$	
	(108 - 177 + 72 =) 3	A1	4		
(b)	(Decreasing) $\Rightarrow 12t^2 - 59t + 72 < 0$	B1ft		<b>FT</b> their $\frac{dh}{dt}$ but must have " < 0 "	
	(4t-9)(3t-8)	M1		attempt at factors or correct use of formula	
	CVs are $(t=)\frac{9}{4}, (t=)\frac{8}{3}$	A1		use of sign discusses on shotsh	
	$\begin{array}{cccc} + & - & + \\ \hline 9 \\ \hline 4 \\ \hline 3 \\ \end{array}$	M1		use of sign diagram or sketch $ \frac{9}{4} \frac{8}{3} $	
	$\frac{9}{4} < t < \frac{8}{3}$	A1	5	fractions must be simplified & <b>B1</b> earned for final <b>A1</b>	
	may have $t < \frac{8}{3}$ AND $t > \frac{9}{4}$			no <b>ISW</b> here	
	Total		9		
(b)	Total9)For first M1, if using formula need to go as far as $\frac{59 \pm \sqrt{25}}{24}$ if inequality is correct and to a similar form if following through from their quadratic; if factorising quadratic (correct or incorrect) then factors should multiply out to give $t^2$ and constant terms to earn first M1.For second M1, if critical values are correct then sign diagram or sketch must be correct with correct CVs marked in correct order. However, if CVs are not correct then second M1 can be earned for attempt at sketch or sign diagram but their CVs MUST be marked correctly on the diagram or sketch. For final A1, inequality must have t and no other letter.If B1 is earned and correct quadratic inequality is seen,
