- 2 The diagram shows a square with perimeter 16 cm.

Work out the proportion of the area inside the square that is shaded.

$$\text{Square side length} = \frac{16}{4} = 4$$

$$\text{Area of square} = 16$$

$$\begin{aligned} \text{Area of nonshaded part} &= \left(\frac{1}{2} \times 1 \times 4\right) + \left(\frac{1}{2} \times 2 \times 4\right) \\ &= 6 \end{aligned}$$

$$\frac{16-6}{16} = \frac{5}{8}$$

- 3 David has designed a game.
He uses a fair 6-sided dice and a fair 5-sided spinner.
The dice is numbered 1 to 6
The spinner is numbered 1 to 5

Each player rolls the dice once and spins the spinner once.
A player can win £5 or win £2

<p>Win £5</p> <p>roll a 5 and spin a 5</p>	<p>Win £2</p> <p>roll a 1 or spin a 1 or both</p>
---	--

David expects 30 people will play his game.
Each person will pay David £1 to play the game.

- (a) Work out how much profit David can expect to make.

$$\frac{1}{6} \times \frac{1}{5} = \frac{1}{30} \text{ (win £5)}$$

$$\frac{1}{6} + \frac{1}{5} + \frac{1}{30} = \frac{12}{30} \quad \left(\frac{1}{6} \times \frac{4}{5} \right) + \left(\frac{5}{6} \times \frac{1}{5} \right) + \frac{1}{30} \times 30 \times 2$$

$$= \frac{1}{3}$$

$$\cancel{£30} - \cancel{£5} - \cancel{£24} =$$

so $\frac{1}{30}$ win £5 and $\frac{1}{3}$ win £2.

$$\text{Profit} = 30 - \left(\frac{1}{30} \times 30 \times 5 \right) - \left(\frac{1}{3} \times 30 \times 2 \right) = 5$$

£ 5
(4)

- (b) Give a reason why David's actual profit may be different to the profit he expects to make.

This is just based on probability, the actual profit may vary.

- 4 Triangle ABC has perimeter 20 cm.

$$AB = 7 \text{ cm.}$$

$$BC = 4 \text{ cm.}$$

By calculation, deduce whether triangle ABC is a right-angled triangle.

$$AC = 20 - 7 - 4 = 9$$

$$4^2 + 7^2 = 65 \neq 9^2 = 81$$

Hence Triangle ABC does not satisfy
Pythagoras' equation, so not a right-angle triangle.

$$25 \times 20 = 500 \text{ g}$$

$$7\frac{1}{2}$$

(3)

- (b) Write the numbers 3, 4, 5 and 6 in the boxes to give the greatest possible total.

$\frac{1}{3}$ off normal price

Combination ovens

A combination oven has a sale price of £84

Which of these ovens has the greater normal price?
You must show all your working.

$$90 \div \frac{2}{3} = \frac{90 \times 3}{2} = 135$$

$$84 \div \frac{6}{10} = \frac{840}{6} = 140$$

- 9 Here is a cuboid.

All measurements are in centimetres.

x is an integer.

The total volume of the cuboid is less than 900 cm^3

Show that $x \leq 5$

$$x \times 3x \times 2x < 900$$

$$\Rightarrow 6x^3 < 900$$

$$\Rightarrow x^3 < 150$$

$$\Rightarrow x < \sqrt[3]{150}$$

$$\sqrt[3]{125} = 5$$

$$\sqrt[3]{125} = 5$$

$$6^3 = 216$$

As x is an integer, $x < 6$, so $x \leq 5$

Find the value of y when $x = 6$

$$\text{Volume of cone} = \frac{1}{3} \pi r^2 h$$

$$\text{Volume of sphere} = \frac{4}{3} \pi r^3$$

The total height of the solid is $5x$
 The radius of the base of the cone is x
 The radius of the hemisphere is x

A cylinder has the same volume as the solid.
 The cylinder has radius $2x$ and height h
 All measurements are in centimetres.

Find a formula for h in terms of x
 Give your answer in its simplest form.

$$\text{height of cone} = 5x - x = 4x$$

$$\begin{aligned} \text{Volume of cone} &= \frac{1}{3} \pi x^2 4x \\ &= \frac{4}{3} \pi x^3 \end{aligned}$$

$$\begin{aligned} \text{Volume of hemisphere} &= \frac{1}{2} \times \frac{4}{3} \pi x^3 \\ &= \frac{2}{3} \pi x^3 \end{aligned}$$

$$\begin{aligned} \text{Volume of solid} &= \frac{2}{3} \pi x^3 + \frac{4}{3} \pi x^3 \\ &= \boxed{2\pi x^3} \end{aligned}$$

$$\begin{aligned} \text{Volume of cylinder} &= \pi (2x)^2 h \\ &= 4x^2 \pi h \end{aligned}$$

$$V_{\text{solid}} = V_{\text{cylinder}}$$

$$\Rightarrow 2\pi x^3 = 4x^2 \pi h$$

$$\Rightarrow 2h = x$$

$$\Rightarrow h = \frac{x}{2}$$

$$h = \frac{x}{2}$$

12 $ABCD$ is a parallelogram.

E is the point where the diagonals AC and BD meet.

Prove that triangle ABE is congruent to triangle CDE .

$AB = DC$, because opposite sides of a parallelogram are equal.

Angle $BAE = \text{Angle } ACD$ because they are alternate angles.

Angle $ABE = \text{Angle } CDE$ for the same reason.

Hence $\triangle ABE$ is congruent to $\triangle CDE$ due to ASA.

- 13 Mr Brown gives his class a test.

The 10 girls in the class get a mean mark of 70%

The 15 boys in the class get a mean mark of 80%

Nick says that because the mean of 70 and 80 is 75 then the mean mark for the whole class in the test is 75%

Nick is not correct.

Is the correct mean mark less than or greater than 75%?

You must justify your answer.

The mean mark for boys is greater than girls,
there are also more girls than boys. Thus,
the mean mark for the whole class will be greater
than 75.
