Oxford Cambridge and RSA

## GCSE (9-1)

## Computer Science

J276/02: Computational thinking, algorithms and programming
General Certificate of Secondary Education

Mark Scheme for June 2019

OCR (Oxford Cambridge and RSA) is a leading UK awarding body, providing a wide range of qualifications to meet the needs of candidates of all ages and abilities. OCR qualifications include AS/A Levels, Diplomas, GCSEs, Cambridge Nationals, Cambridge Technicals, Functional Skills, Key Skills, Entry Level qualifications, NVQs and vocational qualifications in areas such as IT, business, languages, teaching/training, administration and secretarial skills.

It is also responsible for developing new specifications to meet national requirements and the needs of students and teachers. OCR is a not-for-profit organisation; any surplus made is invested back into the establishment to help towards the development of qualifications and support, which keep pace with the changing needs of today's society.

This mark scheme is published as an aid to teachers and students, to indicate the requirements of the examination. It shows the basis on which marks were awarded by examiners. It does not indicate the details of the discussions which took place at an examiners' meeting before marking commenced.

All examiners are instructed that alternative correct answers and unexpected approaches in candidates' scripts must be given marks that fairly reflect the relevant knowledge and skills demonstrated.

Mark schemes should be read in conjunction with the published question papers and the report on the examination.

## Annotations

| Annotation | Meaning |
| :---: | :---: |
| BP | Blank page |
| $\wedge$ | Omission mark |
| BOD | Benefit of doubt |
| $N$ | Cross |
| FT | Follow through |
| NAQ | Not answered question |
| NBOD | Benefit of doubt not given |
| REP | Repeat |
| 1 | Slash |
| $\checkmark$ | Tick |
| TV | Too vague |
| 0 | Zero (big) |
| SEEN | Noted but no credit given |

| Question |  |  | Answer |  | Mark | Guidance |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | (a) | (i) | 1 mark per bullet to max 2 . <br> - Height/amplitude of wavef <br> - Converted to / stored as bin <br> - Sample / measurements tak set interval / by sensible ex second) | is sampled/measured digital at a regular interval / ple (eg 44,000 times per | $\begin{gathered} 2 \\ \mathrm{AO} 1 \mathrm{lb}(2) \end{gathered}$ | Do not accept frequency <br> Do not accept unrealistic sample rates (e.g. once per second). |
| 1 | (a) | (ii) | 1 mark per bullet to max 1 . <br> - number of samples taken period <br> - How often/regularly a samp | cond / per time aken | $\begin{gathered} 1 \\ \mathrm{AO} 1 \mathrm{a}(1) \end{gathered}$ | Accept reference to Hertz (Hz) as time period. |
| 1 | (a) | (iii) | 1 mark per tick to max 2. | Tick $(\checkmark)$ two <br> boxes <br> $\boldsymbol{V}$ <br> $\boldsymbol{V}$ | $\begin{gathered} 2 \\ \mathrm{AO} 1 \mathrm{~b}(2) \end{gathered}$ | If 3 ticks given, max 1 mark If 4 ticks given, 0 marks. |
| 1 | (b) | (i) | 1 mark per bullet to max 3 . <br> - Image made of / split up in <br> - Each pixel given a binary c <br> - ...which represents the colour <br> - Each colour is given a diffe <br> - Metadata stored alongside | ixels <br> f that pixel <br> /unique binary code. mage | $\begin{gathered} 3 \\ \mathrm{AO} 1 \mathrm{1b}(3) \end{gathered}$ | BP1 needs idea of picture made up of pixels, not just mention of the word "pixel" <br> Not enough to say "each colour is given a binary code", must have the idea of this being unique or different for each different colour. <br> Accept examples of metadata such as height/width, geolocation, etc. Do not accept file size/file name. |

| 1 | (b) | (ii) | 1 mark per bullet to max 2 . <br> - Computers consist of transistors / switches / logic circuits / gates... <br> - ...which only have two values / on or off / 1 or 0 / open or closed | $\begin{gathered} 2 \\ \mathrm{AO} 1 \mathrm{~b}(2) \end{gathered}$ | Only give BP2 if BP1 given. <br> BP1 must refer to hardware that switches between two states. Do not accept processor for this. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 1 | (b) | (iii) | 1 mark per bullet <br> 2 marks max for advantages <br> 2 marks max for disadvantages <br> Advantages <br> - File size is reduced / gets smaller // image contains less data <br> - ..so quicker to upload / download / load / transfer <br> - ...takes up less storage space // space on the web server <br> - ...less (mobile) data usage <br> - ...permanent reduction <br> Disadvantages <br> - Quality of image is reduced (compared to original) <br> - ...because data is lost / removed // by example (eg fewer colours / lower resolution) <br> - ...reduction is permanent / not reversible | $\begin{gathered} 4 \\ \mathrm{AO} 2 \mathrm{~b}(4) \end{gathered}$ | Do not accept "size" to mean "file size" for advantage. "Data is permanently removed" gets 2 marks for a disadvantage |

| 2 | (a) | 1 mark per bullet to max 4, 1 mark per row <br> - 10 <br> - 6 <br> - 6 <br> - 2 | $\begin{gathered} 4 \\ \mathrm{AO} 2 \mathrm{~b}(4) \end{gathered}$ | Correct Answer Only <br> Do not accept " $X$ ", " $Y$ ", etc. |
| :---: | :---: | :---: | :---: | :---: |
| 2 | (b) | 1 mark per bullet to max 6 . <br> - Inputs two value (as $X$ and $Y$ ) <br> - Compares if $X$ is larger than $Y$... <br> - ...Outputs $\mathrm{Y}^{*} \mathrm{X}$ only when False <br> - Compares if $X$ is less than $12 \ldots$ <br> - $\quad$.. Outputs $X$ only when True and $X>Y$ <br> - $\quad$.. Outputs $Y$ only when False and $X>Y$ | $\begin{gathered} 6 \\ \text { AO3 } 2 \mathrm{~b}(6) \end{gathered}$ | Question specifically asks for pseudocode. <br> Outputs should only be given if they occur with the right condition(s). <br> Example algorithm ```input x input y if x > y then if x < 12 then print x else print y end if else print y*x end if``` <br> Variables do not have to be called x and y . <br> Accept equivalent comparisons (e.g. if $\mathrm{X}<=\mathrm{Y}$ ) <br> Allow FT for outputs from incorrect comparisons where a sensible attempt has been made. |

| 2 | (c) |  | 1 mark per bullet to max 4, 2 mark max per method <br> - Compiler <br> - ...translates code in one go / all at once <br> - ...produces an executable file // does not need to be compiled again <br> - Interpreter <br> - ...translates code line by line. <br> - ...will be interpreted / translated every time it is run. | $\begin{gathered} 4 \\ \mathrm{AO} 1 \mathrm{~b}(4) \end{gathered}$ | Mark first method only in each section |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 3 | (a) | (i) | 1 mark per bullet to max 1 <br> - An error that results in incorrect output / unexpected result <br> - Contains an error but still runs / doesn't crash | $\begin{gathered} 1 \\ \mathrm{AO} 1 \mathrm{~b}(1) \end{gathered}$ | Do not accept examples of logic errors. |
| 3 | (a) | (ii) | if num MOD $2=0$ then <br> if num MOD $2=0$ then | $\begin{gathered} 1 \\ \mathrm{AO} 3 \mathrm{~b}(1) \end{gathered}$ | Important point is that $>=$ is changed to $==$ or $=$. Accept alternatives that produce the same result (e.g. $<=0,<1$, !=1, etc.) <br> Ignore any casting (e.g. using int() to convert to a number) <br> Accept other minor changes to the line as long it logically works. <br> Accept versions of MOD from high level languages (e.g. <br> Python: if num \% 2 == 0) |

| 3 | (b) | (i) | 1 mark per bullet to max 1 <br> - An error in the grammar of the program // error that breaks the rules of the programming language <br> - Contains an error but will not run / translate / execute | $\begin{gathered} 1 \\ \mathrm{AO} 1 \mathrm{~b}(2) \end{gathered}$ | Do not accept examples of syntax error (e.g. misspelling). |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 3 | (b) | (ii) | print("odd") | $\begin{gathered} 1 \\ \mathrm{AO} 2 \mathrm{~b}(1) \end{gathered}$ | Must include quotes (single or double). Do not penalise spelling mistakes in message. <br> Accept sensible alternatives to "odd" <br> Accept alternatives for print / output as long as spelling is accurate |
| 4 | (a) | (i) | 1 mark per bullet to max 2 <br> - Removing / hiding / obscuring unnecessary detail <br> - Focusing on the important detail <br> - Simplifies the problem // reduces complexity // Easy to solve / understand | $\begin{gathered} 2 \\ \text { AO1 1a (1) } \\ \text { AO1 1b }(1) \end{gathered}$ | Accept answers relating to using fewer computational resources <br> Must be the programmer making the decision. |
| 4 | (a) | (ii) | 1 mark per bullet to max 1 <br> - Suitable example of what can be focused on (e.g. player name, match results, goals scored) <br> - Suitable example of what to remove/hide (anything relevant that is not results/goals scored) <br> - Suitable example of a simplification made | $\begin{gathered} 1 \\ \mathrm{AO} 21 \mathrm{a}(1) \end{gathered}$ | Mark first answer only <br> Allow any suitable example of abstraction as long it is relevant to the system. <br> Allow either first name or surname to be removed as an example, but do not allow both to be removed. |

| 4 | (b) |  | 1 mark per bullet, mark in pairs. Max 2 per point. <br> e.g. <br> - Input sanitisation <br> - ...cleaning up input data / removing unwanted data <br> - ...by example (e.g. removing special characters / preventing SQL injection) <br> - Validation <br> - ...checking whether input data should be allowed / is sensible / follows criteria <br> - ...by example (e.g. goals cannot be less than 0 ) <br> - Verification <br> - ... checking whether data has been entered correctly <br> - ...by example (e.g. double entry / visual check) <br> - Authentication <br> - ...ensuring only allowed / authorised users can gain access <br> - ...by example (e.g. usernames /passwords) <br> - Maintainable code <br> - ...to allow other programmers to understand the code <br> - ...by example(e.g. comments, indentation, meaningful variable names) | $\begin{gathered} 4 \\ \mathrm{AO} 2 \text { 1a (2) } \\ \mathrm{AO} 2 \text { 1b (2) } \end{gathered}$ | Mark first answer only in each section <br> For validation, allow one example of a type of validation (e.g. type check, range check) <br> e.g. question so allow other sensible examples such as audit logging, encryption of data <br> Do not allow "data is correct" as expansion for validation validation checks that data is sensible or follows rules, NOT that it is correct. <br> Planning for contingencies and anticipating misuse are not examples by themselves, but discussion of these may fit under other points - e.g. input sanitisation, validation. |
| :---: | :---: | :---: | :---: | :---: | :---: |

| 4 | (c) | 1 mark per bullet to max 3 <br> - count <br> - = nogoalscount + 1 <br> - nogoalscount | $\begin{gathered} 3 \\ \mathrm{AO} 3 \mathrm{~b}(3) \end{gathered}$ | Correct answer only. <br> Accept alternatives to adding 1 to variable (e.g. $+=1 /$ ++ ) <br> Penalise spelling once only, FT for further mistakes. Do not penalise case. <br> Accept sensible messages printed out alongside nogoalscount |
| :---: | :---: | :---: | :---: | :---: |
| 5 | (a) | 1 mark per bullet to max 2 <br> - 163 <br> - Correct working shown. | $\begin{gathered} 2 \\ \mathrm{AO} 1 \mathrm{lb}(2) \end{gathered}$ | Award working mark independently of final answer but working must be correct (e.g. (16 x 10) +3 ) |
| 5 | (b) | 1 mark per bullet to max 2 <br> - 91 <br> - Correct working shown. | $\begin{gathered} 2 \\ \mathrm{AO} 1 \mathrm{lb}(2) \end{gathered}$ | Award working mark independently of final answer but must be correct (e.g. $1+2+8+16+64 / /$ correct binary headings with correct binary underneath) |
| 5 | (c) | - 9 | $\begin{gathered} 1 \\ \mathrm{AO} 1 \mathrm{~b}(1) \end{gathered}$ | Correct answer only Do not accept $3^{2}$ or $3 \times 3$ |
| 5 | (d) | 1 mark per nibble to max 2 <br> - 11011101 | $\begin{gathered} 2 \\ \mathrm{AO} 1 \mathrm{~b}(2) \end{gathered}$ | Mark from right to left. |

| 6 | (a) | (i) | 1 mark per bullet to max 6 <br> - Function ticketprice() defined <br> - ... that accepts two parameters and has no other inputs <br> - Works out total ticket price for adult (eg adult * 19.99) <br> - Works out total ticket price for children (eg child * 8.99) <br> - Adds on correct booking fee <br> - Returns the calculated value. | $\begin{gathered} 6 \\ \text { AO3 } 2 \mathrm{~b}(6) \end{gathered}$ | Bullet points 3, 4, 5 can be awarded even if no mention of a function / parameters (for example, if candidate has inputted the number of tickets needed. <br> Do not award return value if no attempt at a function. Return mark can be given if a good attempt made at calculating the total, even if this is incorrect. <br> Allow 2.50 booking fee to be per order or per ticket <br> Ticket prices must be stored appropriately if needed. <br> example algorithm ```function ticketprice(numadult, numchild) price = (numadult * 19.99) + (numchild * 8.99) + 2.50 return price end function``` <br> Allow alternatives in high level languages (e.g. def in Python). <br> Allow return as assigning the value to the name of the function (VB syntax) |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | (a) | (ii) | 1 mark per bullet to max 2 <br> - Real... <br> - ...Returned value may not be a whole number / may have a decimal point in | $\begin{gathered} 2 \\ \mathrm{AO} 21 \mathrm{a}(1) \\ \mathrm{AO} 21 \mathrm{~b}(1) \end{gathered}$ | Allow String only if matching justification shows understanding (e.g. $£$ sign attached, message returned alongside value). |

| 6 | (b) | (i) | 1 mark per bullet to max 1 <br> - Check that the code is valid / real <br> - Check it has been entered / sent / received correctly. <br> - Makes it harder for people to make up discount codes | $\begin{gathered} 1 \\ \mathrm{AO} 2 \mathrm{~b}(1) \end{gathered}$ | Mark first answer only |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | (c) | (i) | - Not in order / sorted | $\begin{gathered} 1 \\ \mathrm{AO} 2 \mathrm{~b}(1) \end{gathered}$ | Mark first answer only |
| 6 | (c) | (ii) | - Linear (search) | $\begin{gathered} 1 \\ \mathrm{AO} 1 \mathrm{~b}(1) \end{gathered}$ | Mark first answer only Allow other valid searching algorithms as long as they work on an unsorted list (e.g front and back search) |
| 6 | (d) | (i) | 1 mark per bullet to max 2 <br> - Flag / record whether a swap has taken place or not <br> - checked as condition to decide whether to repeat | $\begin{gathered} 2 \\ \mathrm{AO} 2 \mathrm{~b}(2) \end{gathered}$ | The variable records whether a swap has taken place; it does not perform the swap. |
| 6 | (d) | (ii) | 1 mark per bullet to max 2 <br> - Swaps.. <br> - ...values of queuesize[p] and queuesize[p+1] <br> - ...when queuesize [p] is larger than queuesize[p+1] <br> - using a temporary variable //doesn't overwrite numbers //explanation of process | $\begin{gathered} 2 \\ \mathrm{AO} 2 \mathrm{~b}(2) \end{gathered}$ | Do not accept "sorts numbers" <br> "swaps numbers" meets BP1. Explanation of which values in the array are swapped meets BP1 and BP2. <br> Do not accept direct word for word repetition from the program (e.g. temp = queuesize[p] ), question asks for an explanation. <br> Explanation of temporary variable must be logically correct. |

| 6 | (d) | (iii) | 1 mark per bullet to max 2 . <br> - Comments <br> - ... to enable programmers to understand the purpose of each line / section <br> - ...by example (e.g. on line 4 add the comment...) <br> - Naming variables sensibly <br> - ... to enable programmers to understand the purpose of each variable <br> - ...by example (e.g. change identifier p to ...) <br> - Modularise <br> - ...to allow reuse / makes easier to test / reduces errors <br> - ...by example (e.g. create as a function) | $\begin{gathered} 2 \\ \mathrm{AO} 2 \text { 1a (1) } \\ \mathrm{AO} 2 \text { 1b (1) } \end{gathered}$ | Mark first answer only <br> Do not accept indentation (already done) <br> Accept "show what each line does" for comments. |
| :---: | :---: | :---: | :---: | :---: | :---: |
| 6 | (d) | (iv) | 1 mark per bullet to max 2 . <br> - Insertion (sort) <br> - Merge (sort) | $\begin{gathered} 2 \\ \mathrm{AO} 1 \mathrm{a}(2) \end{gathered}$ | Accept "insert". Do not penalise spelling. <br> Do not accept bubble sort (given in previous questions) <br> Do not award searching algorithms <br> Allow other valid sorting algorithms. <br> (e.g. quick sort, heap sort, shell sort, selection sort, radix sort, bucket sort, tim sort, comb sort, pigeonhole sort, etc.) |

| 6 | (e) |  | 1 mark per bullet to max 8 . <br> - Input height <br> - Accepts riders > / >= 140 with suitable message <br> - Rejects riders < / <= 120 with suitable message <br> - Checks if height between 120 and $140 \ldots$ <br> - ... If True, input whether accompanied <br> - ... Suitable output message for True AND False <br> - Correctly counts number of riders in all cases of being allowed to ride (do not penalise candidates for counting or not counting accompanying adults) <br> - Attempt to loop based on 8 riders allowed <br> Some checks for rider height may be implicit (e.g. using ELSE after checking other heights). If the answer logically works to produce the correct output, it should be marked as correct. <br> Loop will almost certainly be condition controlled (WHILE/DO UNTIL) to gain BP8; count controlled (FOR) loop requires significant manipulation to work successfully. | $\begin{gathered} 8 \\ \mathrm{AO} 3 \mathrm{~b}(8) \end{gathered}$ | Answers can be in any suitable format (including pseudocode, flowchart, etc). If flowchart used, accept any sensible shapes. <br> Do not penalise for lack of initialisation of variables. <br> Loop must repeat until 8 riders allowed, not just loop 8 times. <br> Do not credit asking whether accompanied if in the wrong place. ```Condition for BP4 may be 120<h < 140 Example algorithm riders=0 while riders <8 input height if height >= 140 then output "allowed" riders = riders + 1 elif height >=120 then input withadult if withadult == "yes" output "allowed" riders = riders + 1 else output "not allowed" end if else output "not allowed" end if endwhile``` |
| :---: | :---: | :---: | :---: | :---: | :---: |
