### Instructions

- Use **black** ink or ball-point pen.
- **Fill in the boxes** at the top of this page with your name, centre number and candidate number.
- Answer **all** questions.
- Answer the questions in the spaces provided  
– *there may be more space than you need.*
- You must **show all your working**.
- Diagrams are **NOT** accurately drawn, unless otherwise indicated.
- **Calculators may not be used.**

### Information

- The total mark for this paper is 80
- The marks for **each** question are shown in brackets  
– *use this as a guide as to how much time to spend on each question.*

### Advice

- Read each question carefully before you start to answer it.
- Keep an eye on the time.
- Try to answer every question.
- Check your answers if you have time at the end.

Answer ALL questions.

Write your answers in the spaces provided.

You must write down all the stages in your working.

- 1 There are only blue cubes, red cubes and yellow cubes in a box.

The table shows the probability of taking at random a blue cube from the box.

Colour	blue	red	yellow
Probability	0.2	0.4	0.4

The number of red cubes in the box is the same as the number of yellow cubes in the box.

- (a) Complete the table.

$$\frac{1 - 0.2}{2} = 0.4 \text{ each}$$

There are 12 blue cubes in the box.

- (b) Work out the total number of cubes in the box.

$$\frac{12}{0.2} = 60$$

- 2 Deon needs 50 g of sugar to make 15 biscuits.

She also needs

three times as much flour as sugar

two times as much butter as sugar

Deon is going to make 60 biscuits.

- (a) Work out the amount of flour she needs.

$$\frac{60}{15} = 4. \quad \text{We need 4 times as much of each ingredient.}$$

$$\text{Flour: } 50\text{g} \times 3 \times 4 = 600\text{g}$$

600 g  
(3)

Deon has to buy all the butter she needs to make 60 biscuits.

She buys the butter in 250 g packs.

- (b) How many packs of butter does Deon need to buy?

$$50\text{g} \times 2 \times 4 = 400\text{g}$$

$$\frac{400}{250} = 1.6$$

$\Rightarrow$  2 packs needed.

- 6 A shop sells packs of black pens, packs of red pens and packs of green pens.

There are

2 pens in each pack of black pens

5 pens in each pack of red pens

6 pens in each pack of green pens

On Monday,

number of packs of black pens sold : number of packs of red pens sold : number of packs of green pens sold = 7:3:4

A total of 212 pens were sold.

Work out the number of green pens sold.

$$(2 \times 7) : (3 \times 5) : (4 \times 6) = 14 : 15 : 24$$

$$14 + 15 + 24 = 53$$

Upper quartile	66
Least age	41
Greatest age	79

(2)

Here is some information about the ages of the people on coach B.

Median	70
Lower quartile	54
Upper quartile	73
Least age	42
Greatest age	85

Richard says that the people on coach A are younger than the people on coach B.

(b) Is Richard correct?  
You must give a reason for your answer.

Yes, all statistics are lower for coach A.

(1)

Richard says that the people on coach A vary more in age than the people on coach B.

(c) Is Richard correct?

You must give a reason for your answer.

No, the IQR for coach A is 13, but is 19 for coach B. A smaller IQR indicates that the variance in age is smaller on coach A. (1)
