A-level MATHEMATICS

Paper 1

Wednesday 3 June 2020

Afternoon

Time allowed: 2 hours

Materials

- You must have the AQA Formulae for A-level Mathematics booklet.
- You should have a graphical or scientific calculator that meets the requirements of the specification.

Instructions

- Use black ink or black ball-point pen. Pencil should only be used for drawing.
- Fill in the boxes at the top of this page.
- Answer all questions.
- You must answer each question in the space provided for that question.
 If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Show all necessary working; otherwise marks for method may be lost.
- Do all rough work in this book. Cross through any work that you do not want to be marked.

Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 100.

Advice

- Unless stated otherwise, you may quote formulae, without proof, from the booklet.
- You do not necessarily need to use all the space provided.

The first three terms, in ascending powers of x, of the binomial expansion of 1 $(9+2x)^{\frac{1}{2}}$ are given by

$$(9+2x)^{\frac{1}{2}} \approx a + \frac{x}{3} - \frac{x^2}{54}$$

where a is a constant.

State the range of values of x for which this expansion is valid. 1 (a)

Circle your answer.

A student is searching for a solution to the equation f(x) = 02

He correctly evaluates

$$f(-1) = -1$$
 and $f(1) = 1$

and concludes that there must be a root between -1 and 1 due to the change of sign.

Select the function f(x) for which the conclusion is **incorrect**.

Circle your answer.

Mike, an amateur astronomer who lives in the South of England, wants to know how 8 the number of hours of darkness changes through the year.

> On various days between February and September he records the length of time. H hours, of darkness along with I, the number of days after 1 January.

His results are shown in Figure 1 below.

Mike models this data using the equation

$$H = 3.87 \sin \left(\frac{2\pi (t + 101.75)}{365} \right) + 11.7$$

Find the minimum number of hours of darkness predicted by Mike's model. Give your 8 (a) answer to the nearest minute.

Her incorrect attempt is shown below.

Step 1
$$\frac{2x^2 + x}{(x+1)(x+2)^2} \equiv \frac{A}{x+1} + \frac{B}{(x+2)^2}$$

Step 2
$$2x^2 + x \equiv A(x+2)^2 + B(x+1)$$

Step 3 Let
$$x = -1 \Rightarrow A = 1$$

Let $x = -2 \Rightarrow B = -6$
