Tina made a mistake in her working to find the total number of points scored.
(b) Describe the mistake that Tina made.

Tina also worked out the total number of points scored by the 16 students in the game. Here is her working.

$$
(0 \times 1)+(1 \times 3)+(2 \times 5)+(3 \times 4)+(4 \times 3)=1+3+10+12+12=38
$$

Tina worked out the median of the number of points scored to be 5
(a) Explain why it is not possible for the median to be 5

All of the data is below 5 .

Tina has done $O \times 1=1$, but

17 In a shop, a TV has a normal price of $£ 500$
The shop has a sale.
On Monday, the normal price of the TV is reduced by $\frac{1}{10}$ to give the sale price.
On Tuesday, the sale price of the TV is reduced by $20 \%$
Chris wants to buy the TV.
He has $£ 400$ to spend on the TV.
Does Chris have enough money to buy the TV on Tuesday?
You must show how you get your answer.
Reduced by $\frac{1}{10}$ is $\times 0.9$

$$
£ 500 \times 0.9=£ 450
$$

Reduced by $20 \%$ is $\gamma 0.8$

$$
E 450 \times 0.8=£ 360
$$

$$
f 360<f 400
$$

Chris does have enough money.

18 Work out an estimate for $\frac{790 \times 289}{49}$

20 The first five terms of an arithmetic sequence are

$$
\begin{array}{lllll}

2 \frac{1}{3}=\frac{7}{3}=\frac{3}{4}=\frac{15}{4} \\
\frac{7}{3} \times \frac{15}{4}=\frac{35}{4}=8 \frac{3}{4}

22 The diagram shows four graphs．

23 The diagram shows four triangles.

Triangle A

Triangle B

Triangle D

Two of these triangles are congruent.
Write down the letters of these two triangles.

24 Sean pays $£ 10$ for 24 chocolate bars.
He sells all 24 chocolate bars for 50p each.
Work out Sean's percentage profit.

$$
\begin{aligned}
& 24 \times f 0.50=f 12.00 \\
& \frac{12-10}{10} \times 100 \%=20 \%
\end{aligned}
$$

$25 A D C$ is a triangle.

$A E D$ and $A B C$ are straight lines.
$E B$ is parallel to $D C$.
Angle $E B C=148^{\circ}$
Angle $A D C=63^{\circ}$
Work out the size of angle $E A B$.
You must give a reason for each stage of your working.
Angle $A E B=63^{\circ}$ because it is corresponding with EDC.
Angle $A B E=180-148=32^{\circ}$ because it is on a straight line with $E B C$.

Angle $E A B$ is in a triangle with $A E B$ and $A B E$. Hence, $E A B=180-63-32$

$$
E_{A B}=85^{\circ}
$$

26 The table shows information about the heights, in cm , of a group of Year 9 girls.

| least height | 150 cm |
| :--- | :--- |
| median | 165 cm |
| greatest height | 170 cm |

This stem and leaf diagram shows information about the heights, in cm , of a group of 15 Year 9 boys.

| 15 | 899 |
| :--- | :--- |
| 16 | $457 x(8)$ |
| 17 | 0.3447 |
| 18 | 02 |

Key: 15 $\quad 8$ represents 158 cm

Compare the distribution of the heights of the girls with the distribution of the heights of the boys.
The boys are taller on average thar the girls, with a median of 168 cm compared to 165 cm . The boys' heights had a greater range than the girls, at 24 cm compared to 20 cm
