Time allowed: 1 hour 45 minutes

## Materials

For this paper you must have:

- a ruler
- a scientific calculator
- a protractor
- the Physics Equations Sheet (enclosed).

## Instructions

- Use black ink or black ball-point pen. Pencil should only be used for drawing.
- Fill in the boxes at the top of this page.
- Answer all questions in the spaces provided.
- Do not write outside the box around each page or on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do all rough work in this book. Cross through any work you do not want to be marked.
- In all calculations, show clearly how you work out your answer.

## Information

- The maximum mark for this paper is 100.
- The marks for questions are shown in brackets.
- You are expected to use a calculator where appropriate.
- You are reminded of the need for good English and clear presentation in your answers.

| :--- | :--- | :--- |

- the number of turns on the coil
- the frequency of the supply.

Table 2 shows the results.

| 0 | 9 | A teacher demonstrated how a magnetic field can cause a copper rod to accelerate. |
| :--- | :--- | :--- |

The teacher placed the copper rod on two brass rails in a magnetic field.

The copper rod was able to move.
Figure 16 shows the equipment used.
