A-level MATHEMATICS

Paper 2

Time allowed: 2 hours

Materials

- You must have the AQA Formulae for A-level Mathematics booklet.
- You should have a graphical or scientific calculator that meets the requirements of the specification.

Instructions

- Use black ink or black ball-point pen. Pencil should only be used for drawing.
- Fill in the boxes at the top of this page.
- · Answer all questions.
- You must answer each question in the space provided for that question.
 If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- · Show all necessary working; otherwise marks for method may be lost.
- Do all rough work in this book. Cross through any work that you do not want to be marked.

Information

- · The marks for questions are shown in brackets.
- The maximum mark for this paper is 100.

Advice

- Unless stated otherwise, you may quote formulae, without proof, from the booklet
- You do not necessarily need to use all the space provided.

8	Kai is proving that $n^3 - n$ is a multiple of 3 for all positive integer values of n .		
	Kai begins a proof by exhaustion.		
	Step 1		$n^3-n=n(n^2-1)$
	Step 2	When $n = 3m$, where m is a non-negative integer	$n^3 - n = 3m(9m^2 - 1)$ which is a multiple of 3
	Step 3	When $n=3m+1$,	$n^3 - n = (3m + 1)((3m + 1)^2 - 1)$

9 A robotic arm which is attached to a flat surface at the origin O, is used to draw a graphic design.

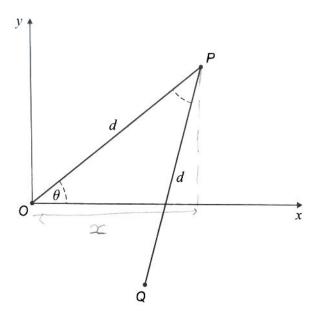

The arm is made from two rods OP and PQ, each of length d, which are joined at P.

A pen is attached to the arm at Q.

The coordinates of the pen are controlled by adjusting the angle OPQ and the angle θ between OP and the x-axis.

For this particular design the pen is made to move so that the two angles are always equal to each other with $0 \le \theta \le \frac{\pi}{2}$ as shown in **Figure 2**.
