A-level MATHEMATICS

Paper 3

Time allowed: 2 hours

Materials

- You must have the AQA Formulae for A-level Mathematics booklet.
- You should have a graphical or scientific calculator that meets the requirements of the specification.

Instructions

- Use black ink or black ball-point pen. Pencil should only be used for drawing.

 Fill in the bases of the base of the base
- Fill in the boxes at the top of this page.
- · Answer all questions.
- You must answer each question in the space provided for that question.
 If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Show all necessary working; otherwise marks for method may be lost.
- Do all rough work in this book. Cross through any work that you do not want to be marked.

Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 100.

Advice

- Unless stated otherwise, you may quote formulae, without proof, from the booklet.
- You do not necessarily need to use all the space provided.

Section A

Do not write outside the box

Answer all questions in the spaces provided.

The graph of $y = \arccos x$ is shown.

State the coordinates of the end point P.

Circle your answer.

[1 mark]

$$(-\pi, 1)$$

$$(-1, \pi)$$

$$\left(-\frac{\pi}{2},\,1\right)$$
 $\left(-1,\,\frac{\pi}{2}\right)$

$$\left(-1, \frac{\pi}{2}\right)$$

box

2 Simplify fully

$$\frac{(x+3)(6-2x)}{(x-3)(3+x)}$$
 for $x \neq \pm 3$

Circle your answer.

[1 mark]

2

$$\frac{(6-2x)}{(x-3)}$$

$$\frac{(2x-6)}{(x-3)}$$

 $f(x) = 3x^2$ 3

Obtain
$$\lim_{h\to 0} \frac{f(x+h) - f(x)}{h}$$

Circle your answer.

[1 mark]

$$\frac{3h^2}{h}$$

$$x^3$$

$$\frac{3h^2}{h} \qquad \qquad x^3 \qquad \qquad \frac{3(x+h)^2 - 3x^2}{h}$$

Turn over for the next question

Do not write
outside the
box

4 (a)	Show that the first three terms, in descending powers of x , of the expansion of
-------	--

$$(2x-3)^{10}$$

are given by

$$1024x^{10} + px^9 + qx^8$$

where p and q are integers to be found.

[3 marks]

$(2x)^{10} + {}^{10}C_{1}(2x)^{9}(-3)^{+10}C_{2}(2x)^{8}(-3)^{2}$	
= 1024x10 - 15360x9 + 103680xc8	

4 (b) Find the constant term in the expansion of

$$\left(2x-\frac{3}{x}\right)^{10}$$

[2 marks]

	 	959552	

5 A gardener is creating flowerbeds in the shape of sectors of circles.

The gardener uses an edging strip around the perimeter of each of the flowerbeds.

The cost of the edging strip is £1.80 per metre and can be purchased for any length.

One of the flowerbeds has a radius of 5 metres and an angle at the centre of 0.7 radians as shown in the diagram below.

5 (a) (i) Find the area of this flowerbed.

[2 marks]

Area of a sector = $\frac{1}{2} \times 5^2 \times 0.7$	
(in radians ½(20)	
= 8.75 m ²	

Question 5 continues on the next page

Do not write

5 (a) (ii) Find the cost of the edging strip required for this flowerbed.

[3 marks]

arc longth =
$$r \circ = 0.7(5) = 3.5$$

- A flowerbed is to be made with an area of 20 m² 5 (b)
- 5 (b) (i) Show that the cost, £C, of the edging strip required for this flowerbed is given by

$$C = \frac{18}{5} \left(\frac{20}{r} + r \right)$$

where r is the radius measured in metres.

[3 marks]

anea:
$$\frac{1}{2}r^2\theta = 20 - 7\theta = 40$$

$$P = \left(\frac{40}{r^2}\right) + 2r$$

$$P = 40 + 2r$$

$$= \frac{72}{r} + \frac{18}{5} r = \frac{18}{5} \left(\frac{20}{5} + 1\right)$$

Do not write
outside the
box

5 (b) (ii)	Hence, show that the minimum cost of the edging strip for this flower when $r \approx 4.5$	ped occurs
	Fully justify your answer.	
W	e know C = 72 + 18 r	[5 marks
	dc 72	

minimum occurs when de = 0

$$\frac{-72 + 18 = 0}{6} + 18 = 0$$

 $r = \sqrt{20} \approx 4.472$ $r \approx 4.5$

check this is a minimum:

$$\frac{d^{2}C}{dr^{2}} = \frac{144}{r^{3}} \quad \text{when } r = \sqrt{20} \quad \frac{d^{2}C}{dr^{2}} = 0$$

therefore minimum at r≈ 4.5

Given that x > 0 and $x \neq 25$, fully simplify

$$\frac{10 + 5x - 2x^{\frac{1}{2}} - x^{\frac{3}{2}}}{5 - \sqrt{x}}$$

Fully justify your answer.

[4 marks]

$$\frac{10+5\alpha-2\alpha^{1/2}-\alpha^{3/2}}{5-\sqrt{\alpha}} \times \frac{5+\sqrt{\alpha}}{5+\sqrt{\alpha}}$$

$$= \frac{60 + 23x - x^2}{25n - x}$$

$$= \frac{(25/x)(2+x)}{25/5c} = 2x + x$$

box

A building has a leaking roof and, while it is raining, water drips into a 12 litre bucket.

When the rain stops, the bucket is one third full.

Water continues to drip into the bucket from a puddle on the roof.

In the first minute after the rain stops, 30 millilitres of water drips into the bucket.

In each subsequent minute, the amount of water that drips into the bucket reduces by 2%.

During the nth minute after the rain stops, the volume of water that drips into the bucket is W_n millilitres.

7 (a) Find W_2

[1 mark]

7 (b) Explain why

$$W_n = A \times 0.98^{n-1}$$

and state the value of A.

[2 marks]

a 2°1. reduction gues a common ratio of 0.98

7 (c)	Find the increase in the water in the bucket 15 minutes after the rain stops.	Do not write outside the box
	Give your answer to the nearest millilitre.	
	[2 marks]	
	$S_n = \alpha (1-r^n)$	
	(1-1)

box

9 A function f is defined for all real values of x as

$$f(x) = x^4 + 5x^3$$

The function has exactly two stationary points when x = 0 and $x = -\frac{15}{4}$

9 (a) (i) Find f''(x)

					[2 marks]
(x)	=	24	+	S~3	

$$\int_{0}^{1} (x) = 4x^{3} + 15x^{2}$$

$$\int_{0}^{1} (x) = 12x^{2} + 30x$$

9 (a) (ii) Determine the nature of the stationary points.

Fully justify your answer.

[4 marks]

at
$$x=0$$
 $f''(x)=0$

: , x=0 is a paint of inflection

at
$$x = -\frac{16}{4}$$
 $f''(x) = 12(-\frac{15}{4})^2 + 30(-\frac{15}{4})$

$$=\frac{225}{4}>0$$

 $x = -\frac{15}{4}$ is a minimum point

9 (b)	State the range of values of x for which	
	$f(x) = x^4 + 5x^3$	
	is an increasing function.	[1 mark]
	$\propto > -15/4$	
9 (c)	A second function g is defined for all real values of x as	
	$g(x) = x^4 - 5x^3$	
9 (c) (i)	State the single transformation which maps f onto g.	[1 mark]
	Reflection in the y ancis	
0 (=) (;;)	Chate the many of unlines of a for which a is an increasing for the

13 The table below is an extract from the Large Data Set.

Propulsion Type	Region	Engine Size	Mass	CO2	Particulate Emissions
2	London	1896	1533	154	0.04
2	North West	1896	1423	146	0.029
2	North West	1896	1353	138	0.025
2	South West	1998	1547	159	0.026
2	London	1896	1388	138	0.025
2	South West	1896	1214	130	0.011
2	South West	1896	1480	146	0.029
2	South West	1896	1413	146	0.024
2	South West	2496	1695	192	0.034
2	South West	1422	1251	122	0.025
2	South West	1995	2075	175	0.034
2	London	1896	1285	140	0.036
2	North West	1896	0	146	

13 (a) (i)	Calculate the mean and standard deviation of CO ₂ emissions in the table.				
	Mean = 148.6	[2 marks]			
	Standard deviation = 17.8				

Do not write
outside the
hox

13 (a) (ii)	Any value more than 2 standard deviations from the mean can be identified as an outlier.
	Determine, using this definition of an outlier, if there are any outliers in this sample of ${\rm CO}_2$ emissions.
	Fully justify your answer. [2 marks]
	148.6 * + 2 (17.8) = 184.2
	148.6 - 2 (17.8) = 113
	113 1 Outher 184.2 < outlies
	192 > 184,2
	192 is the only outlies
13 (b)	Maria claims that the last line in the table must contain two errors. Use your knowledge of the Large Data Set to comment on Maria's claim. [2 marks]
	The O value is an error because eitery (as has a mass
	(W nos a mas
	or an particulate emissions are
	recorded in the LDS

Turn over for the next question

14
$$A$$
 and B are two events such that

not
$$B \mapsto P(A \cap B) = 0.1$$

not $B \mapsto P(A' \cap B') = 0.2$
 $P(B) = 2P(A)$

margurana

14 (a) Find
$$P(A)$$

[4 marks]

$$0.9 = 3P(A)$$

14 (b) Find P(B|A)

[2 marks]

$$P(B|A) = P(A \cap B)$$

14 (c) Determine if A and B are independent events.

[1 mark]

not independent as
$$P(A) \times P(B) = 0.3 \times 0.6 = 0.18 \neq P(A \cap B) = 0.1$$

Turn over for the next question

Do not write
outside the
hav

15 A team game involves solving puzzles to escape from a room.

Using data from the past, the mean time to solve the puzzles and escape from one of these rooms is 65 minutes with a standard deviation of 11.3 minutes.

After recent changes to the puzzles in the room, it is claimed that the mean time to solve the puzzles and escape has changed.

To test this claim, a random sample of 100 teams is selected.

The total time to solve the puzzles and escape for the 100 teams is 6780 minutes.

Assuming that the times are normally distributed, test at the 2% level the claim that the mean time has changed.

[7 marks]
X = time to solve in minutes
Ho: U = 65
H.: M 769
Test statistic = 67.8-65
(11.3/100)
= 2.48
Critical value = 2.33
2.48 > 2.33
Reject Ho : there is sufficient euidonce
at the 2°10 level to suggest that mean
escape time has changeal.

16 The discrete random variable *X* has the probability function

Do not write outside the box

$$P(X = x) = \begin{cases} c(7 - 2x) & x = 0, 1, 2, 3 \\ k & x = 4 \\ 0 & \text{otherwise} \end{cases}$$

where c and k are constants.

16 (a) Show that 16c + k = 1

[2 marks]

$-\infty$	0		2	3	4
P(X = 20)	7 c	5c	3c	С	K

16 (b) Given that $P(X \ge 3) = \frac{5}{8}$

find the value of c and the value of k.
