8300/3F – Paper 3 Foundation Tier Mark scheme

June 2018

Version/Stage: 1.0 Final

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts. Alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Assessment Writer.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this mark scheme are available from aqa.org.uk

AQA retains the copyright on all its publications. However, registered schools/colleges for AQA are permitted to copy material from this booklet for their own internal use, with the following important exception: AQA cannot give permission to schools/colleges to photocopy any material that is acknowledged to a third party even for internal use within the centre.

#### **Glossary for Mark Schemes**

GCSE examinations are marked in such a way as to award positive achievement wherever possible. Thus, for GCSE Mathematics papers, marks are awarded under various categories.

If a student uses a method which is not explicitly covered by the mark scheme the same principles of marking should be applied. Credit should be given to any valid methods. Examiners should seek advice from their senior examiner if in any doubt.

Μ	Method marks are awarded for a correct method which could lead to a correct answer.
Α	Accuracy marks are awarded when following on from a correct method. It is not necessary to always see the method. This can be implied.
В	Marks awarded independent of method.
ft	Follow through marks. Marks awarded for correct working following a mistake in an earlier step.
SC	Special case. Marks awarded for a common misinterpretation which has some mathematical worth.
М dep	A method mark dependent on a previous method mark being awarded.
B dep	A mark that can only be awarded if a previous independent mark has been awarded.
oe	Or equivalent. Accept answers that are equivalent.
	eg accept 0.5 as well as $\frac{1}{2}$
[a, b]	Accept values between a and b inclusive.
[a, b)	Accept values a ≤ value < b
3.14	Accept answers which begin 3.14 eg 3.14, 3.142, 3.1416
Use of brackets	It is not necessary to see the bracketed work to award the marks.

Examiners should consistently apply the following principles

#### Diagrams

Diagrams that have working on them should be treated like normal responses. If a diagram has been written on but the correct response is within the answer space, the work within the answer space should be marked. Working on diagrams that contradicts work within the answer space is not to be considered as choice but as working, and is not, therefore, penalised.

#### Responses which appear to come from incorrect methods

Whenever there is doubt as to whether a student has used an incorrect method to obtain an answer, as a general principle, the benefit of doubt must be given to the student. In cases where there is no doubt that the answer has come from incorrect working then the student should be penalised.

#### Questions which ask students to show working

Instructions on marking will be given but usually marks are not awarded to students who show no working.

#### Questions which do not ask students to show working

As a general principle, a correct response is awarded full marks.

#### Misread or miscopy

Students often copy values from a question incorrectly. If the examiner thinks that the student has made a genuine misread, then only the accuracy marks (A or B marks), up to a maximum of 2 marks are penalised. The method marks can still be awarded.

#### **Further work**

Once the correct answer has been seen, further working may be ignored unless it goes on to contradict the correct answer.

#### Choice

When a choice of answers and/or methods is given, mark each attempt. If both methods are valid then M marks can be awarded but any incorrect answer or method would result in marks being lost.

#### Work not replaced

Erased or crossed out work that is still legible should be marked.

#### Work replaced

Erased or crossed out work that has been replaced is not awarded marks.

#### Premature approximation

Rounding off too early can lead to inaccuracy in the final answer. This should be penalised by 1 mark unless instructed otherwise.

#### **Continental notation**

Accept a comma used instead of a decimal point (for example, in measurements or currency), provided that it is clear to the examiner that the student intended it to be a decimal point.

Question	Answer	Mark	Comments	
	<del>7</del> 100	B1

	(130 × 5 =) 650 followed by 130 × 650 = 84 500			M1M0	
	1:5 or 5:1 is oe (scale factor =) 5			M1	
	130 × 4 (= 520)			M0	

Question	Answer	Mark	Comme	nts	
	No and gives a correct reason	B1	eg the cup is narrower at the bottom the top of the cup is wider the radius of the cup is not constant		
	Ado	ditional G	uidance		
	Ignore irrelevant statements with valid	reasons			
	A correct reason will usually reference width of the cup or that the shape of th				
	No, volume at top is greater than botto	B1			
	No, more area at top			B1	
	No, wider diameter at top	B1			
11	No, doesn't take account of volume (ca	B1			
	No, because it's cone shaped (condone use of cone)			B1	
	No, the cup goes down in circumference as you begin to drink			B1	
	No, the cup is not uniform	B1			
	No, she is talking about the height not the volume			B1	
	No, there is a larger volume in the top half			B1	
	No, more coffee in top half (coffee implies capacity)			B1	
	No, the cup has a changing volume			B1	

Question	Answer	Mark	Comments
	No, it's not a cylinder		B0
	No, there would be 5cm if it was rectar shaped so 5cm is not left	ngular or s	quare but it is cone B0
	No, top half is more (than bottom half) (no reference to volume)	B0	
11	No, the cup gets smaller	B0	
cont	No, because of the shape of the cup	B0	
	No, the cup is not straight	B0	
	No, the cup does not have a symmetri	B0	
	No, because the volume of coffee is no	ed in cm B0	
	No, because 10cm is the measuremen (no reference to height)	p, not the volume B0	

Question	Answer	Mark	Comments

Question	Answer	Mark	Comments			
	Alternative method 1 – Using gradients					
27(a)	Gradient of $y = 3x + 7$ is 3 and $y = 3x + 4$ and gradient of $2y - 6x = 8$ is 3 or $6 \div 2$	B3	May come from using points on line eg using (0, 7) and (1, 10) and $\frac{10-7}{1-0} = 3$ or correct calculation for gradient from points on line $2y - 6x = 8$ eg using (0, 4) and (1, 7) and $\frac{7-4}{1-0} = 3$ B2 for $y = 3x + 4$ and lines have same gradient or $y = 3x + 4$ and gradient of $2y - 6x = 8$ is 3 or $6 \div 2$			
27 (d)			or gradient of $y = 3x + 7$ is 3 and $y = 3x + 4$ B1 for gradient of $y = 3x + 7$ is 3 or $y = 3x + 4$ or gradient of $2y - 6x = 8$ is 3 or $6 \div 2$			
	Alternative method 2 – Using coordi	nates and	distances			
	Chooses a value for $x$ and correctly evaluates the $y$ value for both lines	M1	eg (0, 7) and (0, 4)			
	Chooses a different value for $x$ and correctly evaluates the $y$ value for both lines	M1dep	eg (1, 10) and (1, 7)			
	States that <i>y</i> values are a constant distance apart so parallel	A1	oe			

	Alternative method 3 – Using simultaneous equations				
	y = 3x + 4 or $y - 3x = 4$ or $2y = 6x + 14$ or $2y - 6x = 14$	M1	oe Equates coefficients in any form		
	Any attempt to eliminate both variables from their equations	M1dep			
	States simultaneous equations have no (real) solution and concludes parallel	A1			
	Additional Guidance				
	To award A mark on Alternative method 2, the working must be seen				
27(a)	y = 3x + 4 and lines have gradient of $3x$			B2	
cont	y = 3x + 4 and $3x$ identified in both equations			B2	
	Both lines have gradient 3x			B1	
	y = 3x + 7, gradient 3 and $y = 3x + 8$ , gradient 3 (error in rearrangement)			B1	
	y = 3x + 8, gradient 3 (error in rearrangement)			B0	
	Parallel as both have same gradient			B0	
	2(3x+7) - 6x = 8			M1	
	6x + 14 - 6x = 8			N 4 4	
	14 = 8			M1	
	$y = 3x + 7$ and $y = \frac{8 + 6x}{2}$ are equated coefficients,			M1	
	Alternative method 3
