## A-level

## BIOLOGY

## Paper 3

Time allowed: 2 hours

## Materials

For this paper you must have:

- a ruler with millimetre measurements
- a scientific calculator.

## Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer all questions in Section A.
- Answer one question from Section B.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of

| For Examiner's Use |  |

| TOTAL |  | this book. Write the question number against your answer(s).

- Show all your working.
- Do all rough work in this book. Cross through any work you do not want to be marked.

## Information

- The marks for the questions are shown in brackets.
- The maximum mark for this paper is 78 .

## Section A

Answer all questions in this section.
You are advised to spend no more than 1 hour and 15 minutes on this section.

| 0 | 1 |
| :--- | :--- | Amino acids are used to make proteins. Table 1 shows the R groups of six different amino acids.

## Table 1

| Amino acid | R group |

Question 2 continues on the next page

Two students ( $\mathbf{A}$ and $\mathbf{B}$ ) investigated reaction time in response to touch.

- Student A sat with her eyes shut and her forearm resting on a worktop so that her hand was over the edge.
- Student B held a ruler vertically between student A's thumb and first finger, with the ruler at 0 mm lightly touching student $\mathbf{A}$ 's first finger.
- Student B released the ruler.
- As soon as student A felt the ruler fall, she closed her thumb and first finger to catch the ruler as shown in Figure 5.
- Student B measured the distance the ruler had fallen to the nearest mm

Figure 5

The test was repeated three more times using the same hand to catch the ruler.
Table 3 shows student A's results.
Table 3

| Trial | Distance the ruler has fallen $/ \mathbf{m m}$ |
| :---: | :---: |
| 1 | 79 |
| 2 | 97 |
| 3 | 10 |
| 4 | 94 |

The student was able to convert these distances into reaction times using Table 4.
Table 4

| Distance the ruler fell / mm | Reaction time / ms |
| :---: | :---: |
| 10 | 45 |
| 20 | 64 |
| 30 | 78 |

Antithrombin is a protein. Antithrombin prevents blood from clotting too much.
Some people have a deficiency of antithrombin in their blood, so they need to inject the protein.

Genetically modified goats are used to produce this protein. The human antithrombin gene is transferred into goat embryos. The adult goats then make human antithrombin protein.

Figure 7 shows an example of a DNA fragment that can be transferred into the cells of goats.

Question 5 continues on the next page

Tomato plants grow best in high light intensities. To increase the yield of tomato plants, a farmer uses LED lightbulbs to provide additional light.

The increase in dry mass (D) produced when using additional light can be calculated using this equation.

$$
\mathrm{D}=\frac{\mathrm{L}}{0.4 \mathrm{~F}}
$$

Where
$\mathrm{L}=$ light used in photosynthesis
F = GPP to NPP conversion factor for tomato plants
Table 5 shows some of these values for LED lightbulbs.

## Table 5

Question 5 continues on the next page

#### Abstract

Scientists measured the concentration of poisonous chemicals produced by shade-tolerant plant species in six taxa. They compared this with the mean concentration of poisonous chemicals produced by all plants and the phylogenetic relationships between the six taxa.

Figure 9 shows the scientists' results.
Figure 9

| 0 | $\mathbf{5}$ | 6 |
| :--- | :--- | :--- | A journalist published the following summary of these results.

'The more recently a shade-tolerant plant species evolved, the greater the concentration of poisonous chemicals it produces.'

Do the data in Figure 9 support this summary? Justify your answer.
