# A-level CHEMISTRY

Paper 2 Organic and Physical Chemistry

## Time allowed: 2 hours

#### Materials

For this paper you must have:

- the Periodic Table/Data Booklet, provided as an insert (enclosed)
- a ruler with millimetre measurements
- a scientific calculator, which you are expected to use where appropriate.

#### Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer all questions.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- All working must be shown.
- Do all rough work in this book. Cross through any work you do not want to be marked.

#### Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 105.

| For Exam | iner's Use |
|----------|------------|
| Question | Mark       |
| 1        |            |
| 2        |            |
| 3        |            |
| 4        |            |
| 5        |            |
| 6        |            |

### 0 1.7

For a different reaction, **Table 2** shows the value of the rate constant at different temperatures.

| Та | bl | е        | 2 |
|----|----|----------|---|
|    | ~  | <b>U</b> | _ |

| Experiment | Temperature / K             | Rate constant / s⁻¹         |
|------------|-----------------------------|-----------------------------|
| 1          | $T_1 = 303$                 | $k_1 = 1.55 \times 10^{-5}$ |
| 2          | <i>T</i> <sub>2</sub> = 333 | $k_2 = 1.70 \times 10^{-4}$ |

This equation can be used to calculate the activation energy,  $E_a$ 

$$\ln\left(\frac{k_1}{k_2}\right) = \frac{E_a}{R} \left(\frac{1}{T_2} - \frac{1}{T_1}\right)$$

Calculate the value, in kJ mol<sup>-1</sup>, of the activation energy,  $E_a$ 

The gas constant,  $R = 8.31 \text{ J K}^{-1} \text{ mol}^{-1}$ 

[5 marks]

|         |   |                             |
|         |   |                             |
|         | Amount of bromine mol   |                             |

Calculate a suitable mass of olive oil to transfer to the volumetric flask using your answer to Question 09.1 and the structure of Y.
 Assume that the olive oil contains 85% of Y by mass.

(If you were unable to calculate the amount of bromine in the target titre, you should assume it is  $6.25 \times 10^{-4}$  mol. This is **not** the correct amount.)

#### 0 9 5

A sample of the olive oil was dissolved in methanol and placed in a mass spectrometer. The sample was ionised using electrospray ionisation. Each molecule gained a hydrogen ion (H<sup>+</sup>) during ionisation. The spectrum showed a peak for an ion with <sup>m</sup>/<sub>z</sub> = 345 formed from an impurity in the olive oil. The ion with <sup>m</sup>/<sub>z</sub> = 345 was formed from a compound with the empirical formula C<sub>5</sub>H<sub>10</sub>O Deduce the molecular formula of this compound.
