## A-level PHYSICS

Paper 3 Section B Turning points in physics

#### Materials

For this paper you must have:

- a pencil and a ruler
- a scientific calculator
- a Data and Formulae Booklet
- a protractor.

#### Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer all questions.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do all rough work in this book. Cross through any work you do not want to be marked.
- Show all your working.

### Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 35.
- You are expected to use a scientific calculator where appropriate.
- A Data and Formulae Booklet is provided as a loose insert.

Time allowed: The total time for both sections of this paper is 2 hours. You are advised to spend approximately 50 minutes on this section.

| 1.2 | The student makes alterations to the apparatus in <b>Figure 1</b> .<br><b>Figure 2</b> shows the red and dark fringes that the student now observes on the screen.   |
|-----|--|
|     | Figure 2   |
|     | red fringes  |
|     |  |
|     | dark fringes   |
|     | Identify the alterations made by the student and explain how the observations in <b>Figure 2</b> support Huygens' theory of light.   |
|     | In your answer you should:   |
|     | <ul> <li>identify alterations made to the apparatus in Figure 1</li> <li>outline the key features of Huygens' theory</li> <li>explain how the result of this experiment supports Huygens' theory.</li> </ul> |

Do not write outside the box

**0 1 . 3** Shortly before the work of Newton and Huygens, Francesco Grimaldi carried out an experiment into the behaviour of light. **Figure 3** shows Grimaldi's arrangement.

A bright white light source is used to illuminate a small circular aperture, **AB**. The light from this aperture illuminates a second, slightly larger circular aperture, **CD**.

The light passing through both apertures arrives at a screen.

Newton's theory and Huygens' theory make different predictions about the appearance of the light on the screen.

Discuss these differences in appearance.

[3 marks]

Do not write outside the

box

| 02   | Robert Millikan experimented with oil drops to determine a value for the electronic charge.  | Do not write<br>outside the<br>box |
|------|--|------------------------------------|
|      | <b>Figure 4</b> shows a stationary oil droplet between two horizontal metal plates. The plates are connected to a variable voltage supply so that the upper plate is positive. The oil droplet has mass $m$ and charge $Q$ . |                                    |
|      | Figure 4   |                                    |
|      | variable + stationary<br>voltage<br>supply _ o   |                                    |
| 02.1 | State and explain the sign of the charge on the oil droplet. [1 mark]  |                                    |
|      |  |                                    |
|      |  |                                    |
|      | The variable voltage supply is set to zero volts. The oil drop falls. The constant speed $v_1$ of the falling oil droplet is found to be $3.8 \times 10^{-5}$ m s <sup>-1</sup> and the following measurements are recorded: |                                    |
|      | density of oil = $910 \text{ kg m}^{-3}$<br>viscosity of air = $1.8 \times 10^{-5} \text{ N s m}^{-2}$   |                                    |
| 02.2 | Show that the mass <i>m</i> of the oil droplet is about $8 \times 10^{-16}$ kg. [3 marks]  |                                    |
|      |  |                                    |
|      |  |                                    |
|      |  |                                    |
|      |  |                                    |
|      |  |                                    |
|      |  |                                    |

| 02.5 | After Millikan published his results, it was found that he had used a value for the viscosity of air that was smaller than the actual value. | Do not write<br>outside the<br>box |
|------|--|------------------------------------|
|      | Discuss the effect this error had on Millikan's value of the electronic charge.<br>[3 marks]   |                                    |
|      |  |                                    |
|      |  |                                    |
|      |  |                                    |
|      |  |                                    |
|      |  | 12                                 |
|      |  |                                    |
|      |  |                                    |
|      |  |                                    |
|      |  |                                    |
|      |  |                                    |
|      |  |                                    |
|      |  |                                    |
|      |  |                                    |

| 0 3.2 | The experiment is attempted using a rotating wheel with 720 teeth that can be rotated                           | Do not write<br>outside the<br>box |
|-------|---|------------------------------------|
|       | at up to $620$ revolutions per minute.<br>The distance between <b>W</b> and <b>M</b> is $8.5$ km.               |                                    |
|       | Deduce whether the speed of light can be determined with this particular arrangement.                           |                                    |
|       | [2 marks]   |                                    |
|       |   |                                    |
|       |   |                                    |
|       |   |                                    |
|       |   |                                    |
|       |   |                                    |
|       |   |                                    |
|       |   |                                    |
| 0 3.3 | The determination of the speed of light took on extra significance when Maxwell derived the wave-speed equation |                                    |
|       | $c = \frac{1}{\sqrt{1-1}}$  |                                    |
|       | $\sqrt{arepsilon_0}\mu_0$   |                                    |
|       | State how $\varepsilon_0$ and $\mu_0$ are related to the types of field in the wave.                            |                                    |
|       | [2 marks]   |                                    |
|       | 0   |                                    |
|       |   |                                    |
|       | $\mu_0$   |                                    |
|       |   | 6                                  |
|       |   |                                    |
|       |   |                                    |

| 04.2 | Calculate the speed of a particle when its kinetic energy is equal to its rest       | energy.<br>[3 marks]           | Do not write<br>outside the<br>box |
