AS FURTHER MATHEMATICS

Paper 2 Statistics

Time allowed: 1 hour 30 minutes

Materials

- You must have the AQA Formulae and statistical tables booklet for A-level Mathematics and A-level Further Mathematics.
- You should have a scientific calculator that meets the requirements of the specification.
- You must ensure you have the other optional Question Paper/Answer Book for which you are entered (**either** Discrete **or** Mechanics). You will have 1 hour 30 minutes to complete **both** papers.

Instructions

- Use black ink or black ball-point pen. Pencil should only be used for drawing.
- Fill in the boxes at the top of this page.
- Answer **all** questions.
- You must answer each question in the space provided for that question. If you require extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do **not** write outside the box around each page or on blank pages.
- Show all necessary working; otherwise marks for method may be lost.
- Do all rough work in this book. Cross through any work that you do not want to be marked.

Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 40.

Advice

- Unless stated otherwise, you may quote formulae, without proof, from the booklet.
- You do not necessarily need to use all the space provided.

ANSWER IN THE SPACES PROVIDED**

Answer **all** questions in the spaces provided.

- 1** The discrete random variable X has the following probability distribution

x	-15	18	29
$P(X = x)$	0.2	0.7	0.1

Find $P(X > 18)$

Circle your answer.

[1 mark]

0.1

0.2

0.7

0.8

- 2** The continuous random variable Y has probability density function $f(y)$ where

$$\int_{-\infty}^{\infty} yf(y) dy = 16 \quad \text{and} \quad \int_{-\infty}^{\infty} y^2f(y) dy = 1040$$

Find the standard deviation of Y

Circle your answer.

Turn over ►

3 The discrete random variable A has the following probability distribution function

$$P(A = a) = \begin{cases} 0.45 & a = 0 \\ 0.25 & a = 1 \\ 0.3 & a = 2 \\ 0 & \text{otherwise} \end{cases}$$

3 (a) Find the median of A

[1 mark]

3 (b) Find the standard deviation of A , giving your answer to three significant figures.

[4 marks]

3 (c) Find $\text{Var}(9A - 2)$

[2 marks]

4 The height of lilac trees, in metres, can be modelled by a normal distribution with variance 0.7

A random sample of n lilac trees is taken and used to construct a 99% confidence interval for the population mean.

This confidence interval is (5.239, 5.429)

4 (a) Find the value of n

[3 marks]

4 (b) Joey claims that the mean height of lilac trees is 5.3 metres.

State, with a reason, whether the confidence interval supports Joey's claim.

[1 mark]

Turn over for the next question

Turn over ►

5 The continuous random variable X has probability density function

$$f(x) = \begin{cases} x^3 & 0 < x \leq 1 \\ \frac{9}{1696}x^3(x^2 + 1) & 1 < x \leq 3 \\ 0 & \text{otherwise} \end{cases}$$

5 (a) Find $P(X < 1.8)$, giving your answer to three decimal places.

[3 marks]

5 (b) Find the lower quartile of X

[1 mark]

5 (c) Show that $E\left(\frac{1}{X^2}\right) = \frac{133}{212}$

[4 marks]

5 (d) The random variable Y has a discrete uniform distribution, taking the values 1, 2, 3, 4, 5

Find the exact value of $E\left(\frac{1}{X^2} + Y\right)$

[3 marks]

Turn over ►

6 The number of computers sold per day by a shop can be modelled by the random variable Y where $Y \sim \text{Po}(42)$

6 (a) State the variance of Y

[1 mark]

6 (b) One month ago, the shop started selling a new model of computer.

On a randomly chosen day in the last month, the shop sold 53 computers.

Carry out a hypothesis test, at the 5% level of significance, to investigate whether the mean number of computers sold per day has increased in the last month.

[6 marks]

Do not write
outside the
box

6 (c) Describe, in the context of the hypothesis test in part **(b)**, what is meant by a Type II error.

[1 mark]

Turn over ►

- 7 Wade and Odelia are investigating whether there is an association between the region where a person lives and the brand of washing powder they use.

They decide to conduct a χ^2 -test for association and survey a random sample of 200 people.

The expected frequencies for the test have been calculated and are shown in the contingency table below.

		Brand of washing powder		
		A	B	C
Region	North	14.14	9.66	4.2
	South	20.705	14.145	6.15
	East	32.32	22.08	9.6
	West	33.835	23.115	10.05

Wade conducts a hypothesis test where the number of degrees of freedom for the test is 4

Odelia states that the number of degrees of freedom for the test should be 3

- 7 (a) Explain why **both** Wade's value and Odelia's value for the number of degrees of freedom for the test could be valid.
