Wednesday 10 June 2020 Morning Time allowed: 1 hour 45 minutes

## Materials

For this paper you must have:

- a ruler
- a protractor
- a scientific calculator
- the periodic table (enclosed)
- the Physics Equations Sheet (enclosed).

## Instructions

- Use black ink or black ball-point pen. Pencil should only be used for drawing.
- Fill in the boxes at the top of this page.
- Answer all questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do all rough work in this book. Cross through any work you do not want to be marked.
- In all calculations, show clearly how you work out your answer.

## Information

- The maximum mark for this paper is 100.
- The marks for questions are shown in brackets.
- You are expected to use a calculator where appropriate.
- You are reminded of the need for good English and clear presentation in your answers.

\section*{| $\mathbf{0}$ | $\mathbf{1}$ This question is about polymers and plastics. |

Give one reason why.
$\qquad$
$\qquad$

Poly(chloroethene) is commonly known as PVC.
PVC does not decompose in the ground.

Many polymer plastics like PVC become pollutant waste in the oceans.
In the oceans, PVC can break into smaller pieces.
The smaller pieces are called PVC nanoplastic.

| $\mathbf{0}$ | $\mathbf{1}$ | $\mathbf{3}$ | A piece of PVC nanoplastic has a thickness of 50 nm |
| :--- | :--- | :--- | :--- |

Calculate the thickness of the PVC nanoplastic in metres.
Give your answer in standard form.

The force on the trolley was provided by the masses on the string.

Figure 5 shows how the student set up the equipment.

Figure 5

This is the method used.

1. Release the trolley from the top of the runway.
2. As the card passes each light gate a timer turns on and off.
3. The datalogger calculates the velocity of the trolley at light gate $\mathbf{A}$ and at light gate $\mathbf{B}$.
4. The datalogger calculates the acceleration using the two velocities.
5. Repeat steps $\mathbf{1}$ to $\mathbf{4}$ using different masses.
