GCSE ECONOMICS

Paper 1 How Markets Work

Time allowed: 1 hour 45 minutes

Materials

You will need no other materials. You may use a calculator.

Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer all questions.
- You must answer the questions in the spaces provided. Do not write on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do all rough work in this book. Cross through any work you do not want to be marked.

Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 80.
- Questions should be answered in continuous prose. You will be assessed on your ability to:
 - use good English
 organise information clearly
 - use specialist vocabulary where appropriate.

Figure 1 – The petrol station market in the UK The petrol station market in the UK is dominated by a small number of large firms. As well as petrol, these firms sell other fuels such as diesel. The market shares of selected firms in the UK petrol station market are shown in Table 1 below. Table 1 – Market shares of UK petrol stations 2020 (%) Name of firm Market share 2020 (%) 15.9 Tesco BP 14.5 Shell 13.8 Esso 12.4 10.2 Sainsbury's 33.2 Other In the last 10 years, the number of petrol stations in the UK has fallen by 35% to just over 8000. Consumer groups have expressed concern on several occasions on what they consider consumer exploitation. For example, prices of petrol have not tended to fall at the same rate as falls in costs of crude oil. Firms in the market say that they give motorists choice and good customer service. Using Figure 1, analyse the possible consequences for consumers of the UK petrol station market being dominated by a small number of large firms. [6 marks]

	Figure 2 – Palm oil production
	Palm oil is used in the food industry, as a cooking oil and as an ingredient. It is a cheap alternative to other edible fats such as butter. Palm oil is also used in making soap, washing powder and biofuel.
	Some people are concerned that the production of palm oil leads to environmental damage, as producers cut down forests in Asia to plant trees that produce palm oil. This has led to loss of habitats and an increased risk of flooding in local areas. Clearing land to grow palm oil trees is estimated to cause 2% of global fossil fuel emissions. Health officials are also worried that the fats in palm oil are unhealthy and may lead to problems such as obesity and heart disease.
	Firms in the industry say that it is a cheap alternative to other cooking fats and food ingredients. Palm oil production also creates jobs and export revenues in countries which produce it. The global palm oil industry was estimated to generate \$93 billion in 2021. It also employs over 12 million people in Malaysia and Indonesia, both directly and indirectly.
2 1	Using Figure 2 , assess whether the costs of palm oil production outweigh the benefits.

Section B

Answer **all** questions in the spaces provided.

Item A – Inequality in the UK

Some people have expressed concern that income inequality in the UK is increasing. Inequality can be an example of market failure. According to a 2020 report published by The Equality Trust, the lowest fifth of income earners in the UK earned only 8% of total UK income, while the highest fifth of income earners in the UK earned 40% of the total. The highest 1% of income earners in the UK earned 13% of the total income. One cause of income inequality is wage differentials. Reasons for wage differentials include differences in skills, qualifications and work experience.

Consequences of significant wage differentials may include social tensions as low wage earners come to resent those who receive higher wages. Poverty may also increase.

Item B – Government policies to redistribute income and wealth

Governments have a range of policies that they can choose from to reduce the inequality caused by wage differentials. One option is to use a progressive income tax system such as the one currently used in the UK. **Table 3** shows the income tax bands and tax rates in the UK in 2020–2021.

Tax band (£)	Tax rate (%)
0–12 500	0
12 501–50 000	20
50 001–150 000	40
150 001+	45

Table 3 – Income tax bands and tax rates in the UK 2020–2021

Other policy options include setting or increasing a national minimum wage, increasing welfare benefits to the poorest in society and increasing provision of education and training.

Critics of government policies to reduce inequality argue that they can lead to negative consequences, such as reducing the incentives to work. Improving the delivery of welfare benefits to those that need this kind of support the most can also be expensive

for gover the posit society. used to s in societ often en highest r	rnments. Education and training are also expensive and may take a long time for tive impacts to feed through into better employment prospects for the poorest in Some economists argue that the market forces of supply and demand should be solve the problems of inequality. They say that the incomes of the highest earners y can flow down to the poorest in society. This is because the highest earners are trepreneurs who create employment opportunities and are eligible to pay the rates of income tax.
22	Define the term 'wage differentials'. [2 marks]
2 3	Using Table 3 , calculate the income after tax received by somebody in the UK earning £32 300 in 2020–2021. [3 marks]
	Answer £

2 4	Using Item A , analyse the possible causes of wage differentials.	Do not write outside the box
