# GCSE ECONOMICS

Paper 2 How the Economy Works

Time allowed: 1 hour 45 minutes

## **Materials**

You will need no other materials.

You may use a calculator.

# Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer all questions.
- You must answer the questions in the spaces provided. Do not write on blank pages.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do all rough work in this book. Cross through any work you do not want to be marked.

### Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 80.
- Questions should be answered in continuous prose. You will be assessed on your ability to:
  - use good English
  - organise information clearly
  - use specialist vocabulary where appropriate.

## Figure 1

Many economists believe that government spending should continue to be used to provide healthcare. This helps solve a potential market failure because healthcare generates positive externalities. Without government intervention, healthcare may not be provided in sufficient quantities. In the UK, the government provides healthcare mainly free of charge to all UK citizens. This is expensive, with over £100 billion spent by the government in 2019 on healthcare – which in 2020 and beyond will rise significantly due to the COVID-19 pandemic.

1 5	Using <b>Figure 1</b> , analyse how the government might correct the market fail by healthcare not being provided in sufficient quantities.	ure caused [6 marks]

2021	120.8
2022	122.4

Based on the data shown in **Table 4**, draw a bar chart for the CPI for the years 2018, 2020 and 2021.

[3 marks]

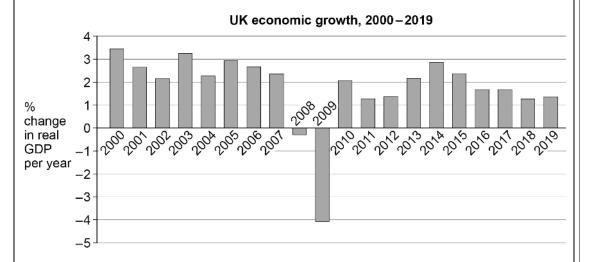

CPI: 2018, 2020 and 2021

## Figure 2

Aiming for a steady rate of economic growth is an important economic objective of the UK government. The average rate of economic growth has gradually fallen in the UK. In the 1980s, the average economic growth was 2.7% per year. In the 1990s, average economic growth fell to 2.3% per year. Since 2000, UK average economic growth up until the pandemic of 2020–2021 was 1.8%.

Governments aim for economic growth because it generates benefits for both the government and the rest of the population. Clearly, economic growth means more is being produced in an economy, which normally means that incomes will be rising – though this may not be shared out evenly. However, there are some problems created by economic growth. If economic growth is too high, then trade-offs with other objectives are more likely to occur.

2   1	Using <b>Figure 2</b> , assess whether the government is right to always aim for economic growth as an objective for the economy.			
	growar do an objective for the observing.	[9 marks]

### Section B

Answer all questions in the spaces provided.

#### Item A

The UK left the European Union (EU) in 2020. Economists have been worried about how this will affect the UK economy.

Within the EU, the UK benefitted from free trade with other EU economies. Foreign trade significantly benefits the UK economy, contributing almost 30% to the UK's Gross Domestic Product (GDP). The ability to sell goods and services outside of the UK allows UK businesses to access wider markets. As shown in Table 5, total UK exports (to EU and non-EU economies) were over \$500 billion in 2016 and have risen over the period 2016–2019.

However, some groups of people believe that the free trade the UK has participated in while a member of the EU has proven harmful. Foreign trade, whilst generating many benefits, may also generate disadvantages for the UK economy. For example, now the UK is outside the EU it is believed that smaller UK businesses will face less competition from other EU businesses who have lower production costs. There will still be competition from low-cost producers outside the EU, but these businesses may not always be able to compete efficiently with UK producers due to other reasons.

Despite no longer being an EU member, the UK has signed a free trade deal with the EU on trade in goods, but not in services. The UK government is also keen to create more free trade deals with other countries. It is believed that the UK government would like to sign a free trade deal with the USA, but there are concerns from many in the UK that this would lead to a rise in cheaper imports of goods that some people think are not desirable, such as chlorinated chicken.

Table 5

UK trade with EU economies

	Exports Imports	
	£bn	£bn
2016	245.6	318.8
2017	278.0	347.9
2018	298.3	366.3
2019	294.3	373.5

UK trade with non-EU economies

	Exports	Imports
	£ bn	£ bn
2016	317.6	280.5
2017	344.9	305.7
2018	363.3	320.8
2019	396.5	347.8

#### Item B

Globalisation has affected all countries across the world – both developed and less economically developed countries. Developed countries have benefitted from globalisation by businesses from these countries being able to sell goods and services to many more people across the world. People in less economically developed countries have also benefitted from the job creation that has followed the locating of multinational companies (MNCs) within these countries as part of increased globalisation.

MNCs are very large when measured in terms of their own sales revenue. Some MNCs generate more income than the GDP of many individual countries. This means governments in less economically developed countries often want to attract MNCs to their countries. However, MNCs and increased globalisation do not always generate the benefits for the less economically developed countries that was hoped for by these governments. For example, a significant proportion of the tax revenue created by the MNCs' activities is often not paid to the government in these countries. This is because the MNCs use tax avoidance schemes that are viewed by some as unethical, but these schemes are usually legal.

Table 6

Selected multinational companies with annual revenues, and selected countries and their GDP for 2020 (all measured in US dollars)

Multinational companies	Revenue (in US\$ billions)
Walmart	599
Amazon	386
Royal Dutch Shell	344
Apple	294
Volkswagen	282

Country	GDP (in US\$ billions)
United Kingdom	2638
Ireland	399
Bangladesh	318
Vietnam	341
Malaysia	336

2 2	Define the term 'free trade'. [2 mark	(s]
2 3	Using <b>Table 5</b> , calculate the size of the UK's <b>total</b> trade balance in 2019 with both E and non-EU economies in £ billions.
