
GCSE GEOGRAPHY 8035/3

Paper 3 Geographical Applications

Mark scheme

June 2022

Version: 1.0 Final

Mark schemes are prepared by the Lead Assessment Writer and considered, together with the relevant questions, by a panel of subject teachers. This mark scheme includes any amendments made at the standardisation events which all associates participate in and is the scheme which was used by them in this examination. The standardisation process ensures that the mark scheme covers the students' responses to questions and that every associate understands and applies it in the same correct way. As preparation for standardisation each associate analyses a number of students' scripts. Alternative answers not already covered by the mark scheme are discussed and legislated for. If, after the standardisation process, associates encounter unusual answers which have not been raised they are required to refer these to the Lead Examiner.

It must be stressed that a mark scheme is a working document, in many cases further developed and expanded on the basis of students' reactions to a particular paper. Assumptions about future mark schemes on the basis of one year's document should be avoided; whilst the guiding principles of assessment remain constant, details will change, depending on the content of a particular examination paper.

Further copies of this mark scheme are available from aqa.org.uk

Point marked questions marking instructions

The mark scheme will state the correct answer or a range of possible answers, although these may not be exhaustive. It may indicate how a second mark is awarded for a second point or developed idea. It may give an indication of unacceptable answers. Each mark should be shown by placing a tick where credit is given. The number of ticks must equal the mark awarded. Do not use crosses to indicate answers that are incorrect.

Level of response marking instructions

Level of response mark schemes are broken down into levels, each of which has a descriptor. The descriptor is linked to the Assessment Objective(s) being addressed. The descriptor for the level shows the average performance for the level.

Before you apply the mark scheme to a student's answer read through the answer and annotate it (as instructed) to show the qualities that are being looked for. You can then apply the mark scheme. You should read the whole answer before awarding marks on levels response questions.

Step 1 Determine a level

Descriptors for the level indicate the different qualities that might be seen in the student's answer for that level. When assigning a level you should look at the overall quality of the answer and not look to pick holes in small and specific parts of the answer where the student has not performed quite as well as the rest. If the answer covers different aspects of different levels of the mark scheme you should use a best fit approach for defining the level and then use the variability of the response to help decide the mark within the level, ie if the response is predominantly Level 2 with a small amount of Level 3 material it would be placed in Level 2 but be awarded a mark near the top of the level because of the Level 3 content. For instance, in a 9 mark question with three levels of response, an answer may demonstrate thorough knowledge and understanding (AO1 and AO2) but fail to respond to command words such as assess or evaluate (AO3). The script could still access Level 2 marks. Note that the mark scheme is not progressive in the sense that students don't have to fulfil all the requirements of Level 1 in order to access Level 2.

Step 2 Determine a mark

Once you have assigned a level you need to decide on the mark. The descriptors on how to allocate marks can help with this. The exemplar materials used during standardisation will also help. There will generally be an answer in the standardising materials which will correspond with each level of the mark scheme. This answer will have been awarded a mark by the Lead Examiner. You can compare the student's answer with the example to determine if it is the same standard, better or worse than the example. You can then use this to allocate a mark for the answer based on the Lead Examiner's mark on the example. You may well need to read back through the answer as you apply the mark scheme to clarify points and assure yourself that the level and the mark are appropriate.

Indicative content in the mark scheme is provided as a guide for examiners. It is not intended to be exhaustive and you must credit other valid points. Students do not have to cover all of the points mentioned in the indicative content to reach the highest level of the mark scheme.

An answer which contains nothing of relevance to the question must be awarded no marks.

Assessment of spelling, punctuation, grammar and use of specialist terminology (SPaG)

Accuracy of spelling, punctuation, grammar and the use of specialist terminology will be assessed via the indicated 9 mark questions. In each of these questions, three marks are allocated for SPaG as follows:

- **High performance** – 3 marks
- **Intermediate performance** – 2 marks
- **Threshold performance** – 1 mark

Responses with SPaG marks that gain a mark of 0 for the content/skills of the question can still be awarded SPaG marks if the response is judged to be a genuine attempt to answer the question.

General guidance

- Mark schemes should be applied positively. Examiners should look for qualities to reward rather than faults to penalise. They are looking to find credit in each response they mark. Unless the mark scheme specifically states, candidates must never lose marks for incorrect answers.
- The full range of marks should be used. Examiners should always award full marks if deserved, ie if the answer matches the mark scheme.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked unless the candidate has replaced it with an alternative response.
- Do NOT add ticks to level-marked questions – use the highlight tool/brackets to signify what is relevant.
- Sometimes there are specific “triggers” in the mark scheme that enable higher level marks to be awarded. For instance, an example or case study may be required for Level 3 if it is stated within the question.
- Where a source, such as a photograph or map, is provided as a stimulus it should be used if requested in the question, but credit can often be given for inferred as well as direct use of the source.
- Always be consistent – accept the guidelines given in the mark scheme and apply them to every script
- If necessary make comments to support the level awarded and to help clarify a decision you have made.
- Examiners should revisit standardised script answers as they apply the mark scheme in order to confirm that the level and the mark allocated is appropriate to the response provided.
- Mark all answers written on the examination paper.

Section A : Issue evaluation

Qu	Pt	Marking Guidance	Total marks												
01	1	<p>What percentage of waste in the UK was household waste in 2018?</p> <p>One mark for correct answer:</p> <p>B: 12%</p> <p>No credit if two or more answers are shaded.</p> <p>AO4c – 1 mark</p>	1												
01	2	<p>Describe the trend in the rate of recycling in England between 2000–2019.</p> <p>1 mark for some appreciation of increase across the whole time period. 1 mark for use of data (2000 - 11/12% and 2019 – 46% / increased by around 35/36% / just over 10% (2000) and 45% (2019))</p> <p>1 mark for identifying a single change in relation to distinct periods;</p> <ul style="list-style-type: none">- rapid growth for first ten years approximately- relatively static/slow growth from about 2010 -2018- slight decline from 2018 <p>No credit for simply saying 'it has stalled'.</p> <p>AO4c – 2 marks</p>	2												
01	3	<p>Suggest why the government’s aim to recycle 65% of waste by 2035 may not be met.</p> <table><tr><th>Level</th><th>Marks</th><th>Description</th></tr><tr><td>2 (Clear)</td><td>3–4</td><td>AO2 – Demonstrates a clear awareness of the concept of recycling and the processes involved in order to allow it to work effectively. 		<ul style="list-style-type: none"> • Level 3 (detailed) – a range of supporting points identified and developed from the resources in order to support a judgement. Reference made to points across the resource booklet which brings in the wider specification context. Offers detailed observations which develop a discussion and support an evidenced judgement. • Level 2 (clear) – use of Figure 3 and some reference to the other resources used in order to support a discussion. Some developed points from resource booklet to support the judgment. • Level 1 (basic) – a limited number of appropriate points identified, mainly from Figure 3, which are largely copied or with limited development. Offers a narrow range of basic observations to support a judgement. <p><u>Indicative content</u></p> <ul style="list-style-type: none"> • Responses might use evidence to consider the viability of waste incinerators in general or focus on the specific issue of the waste incinerator under discussion. A more general discussion is likely to be self-limiting in relation to the use of specific locational evidence. • Focus might be concentrated on the merits of waste incinerators or make relative judgements in relation to other types of waste management. A narrow assessment of waste incinerators alone, in the context of the issue, is likely to be self-limiting. • Waste incineration is seen as an efficient way of dealing with large quantities of waste. • There are environmental questions about potential air pollution and links to health issues and climate change. • Heat and energy generated is seen as an important part of a sustainable energy mix. • There is a relative judgement in terms of how waste incineration can take the pressure off the need to use landfill. • There are other potential by-products that can be utilised (ash). • Waste incineration requires large and regular quantities of waste in order to be efficient. As such it may put pressure on recycling and potential resources may be lost to incineration. • With the increasing cost of exporting waste and more limited global opportunities for exporting waste there will be an increasing volume of waste to manage within the UK. • Waste incineration is not seen as a viable part of the 'Zero waste hierarchy/circular waste economy'. 	
--	--	--	--

		<p>In relation to Cambridge</p> <ul style="list-style-type: none"> • Population growth, industrial development and construction will create additional waste. • The current landfill arrangements have a relatively short time-span so there will be a need for alternative arrangements. • With general recycling rates around 45% there is an opportunity for more recycling but this will require additional facilities. • The proposed waste incinerator will have a significant visual impact. • A new town is going to be built nearby. The waste incinerator can supply this new town (and many other homes) with energy, although there may be concerns about pollution issues because of the nearness to such a large residential area. • The development will create a large number of employment opportunities. • There is a debate about the notion of 'green energy' related to waste incineration. • There may be issues relating to different phases of development (construction/running). <p>AO3(c) – 3 marks, AO3(d) – 3 marks, AO4(d) – 3 marks</p>	
		<p>Spelling, punctuation and grammar (SPaG)</p> <p>Responses with SPaG marks that gain a mark of 0 for the content/skills of the question can still be awarded SPaG marks if the response is judged to be a genuine attempt to answer the question.</p> <p>High performance</p> <ul style="list-style-type: none"> • Learners spell and punctuate with consistent accuracy. • Learners use rules of grammar with effective control of meaning overall. • Learners use a wide range of specialist terms as appropriate. <p>Intermediate performance</p> <ul style="list-style-type: none"> • Learners spell and punctuate with considerable accuracy. • Learners use rules of grammar with general control of meaning overall. • Learners use a good range of specialist terms as appropriate. <p>Threshold performance</p> <ul style="list-style-type: none"> • Learners spell and punctuate with reasonable accuracy. • Learners use rules of grammar with some control of meaning and any errors do not significantly hinder meaning overall. • Learners use a limited range of specialist terms as appropriate. <p>No marks awarded</p> <ul style="list-style-type: none"> • The learner writes nothing. • The learner's response does not relate to the question. • The learner's achievement in SPaG does not reach the threshold performance level, for example errors in spelling, punctuation and grammar severely hinder meaning. 	<p>3</p> <p>2</p> <p>1</p> <p>0</p>

04	1	<p>Which of the following methods would be an appropriate way of presenting the land use survey data?</p> <p>One mark for correct answer:</p> <p>C: Pie chart</p> <p>No credit if two or more answers are shaded.</p> <p>AO4 (1a) – 1 mark</p>	1
04	2	<p>What was the total environmental quality score?</p> <p>Minus 6 or -6</p> <p>AO4 (1c) – 1 mark</p>	1
04	3	<p>Using the data from Figure 4, state two conclusions that the student might draw about the impact of tourism.</p> <p>Accept any appropriate idea which is related to the purpose of the investigation and supported by the data.</p> <p>No credit for just saying “more pollution”, “makes environment worse”</p> <p>The question asks for impacts so suggestions can be positive or negative</p> <ul style="list-style-type: none"> • There are a significant number of tourist related businesses/tourism generates income. • Specific reference to the number/proportion of dedicated tourist businesses (hotels/souvenirs) • The environmental quality is affected because of traffic/congestion. • The environmental quality is affected because of litter. • Pedestrian numbers are quite high/higher in the summer/ tourism brings added numbers of people. • Lots of traffic • Lots of litter <p>No credit for more traffic/more litter</p> <p>Allow two marks if there are two creditworthy points on the same line</p> <p>AO4 (c) – 2 marks</p>	2

04	4	<p>Suggest two ways that the primary data collection methods could be adapted to give more reliable data.</p> <p>The question asks for adaptation rather than additional methods so the answer must clearly reference the information on Figure 4.</p> <p>Suggestions might include:</p> <ul style="list-style-type: none"> • more data / larger sample/ larger number of people/longer period of time/repeated observations • different days of the week • different times of the day • different times of the year (times must be qualified) • wider range of business categories • looks at a larger area/different locations. • less biased way of carrying out environmental quality survey. <p>Accept other relevant adaptations.</p> <p>No credit for reference to questionnaires/asking people.</p> <p>Allow two marks if there are two creditworthy points on the same line.</p> <p>AO4 (1b) – 2 marks</p>	2
----	---	---	---

04	5	<p>Use Figure 5 to complete the following table, which was used to analyse the students' data.</p> <table><tr><td>Mean</td><td>17.6</td></tr><tr><td>Mode</td><td>17</td></tr><tr><td>Median</td><td>17.5</td></tr><tr><td>Range</td><td>4</td></tr></table> <p>3x1 marks (three to complete)</p> <p>AO4 (1c) – 3 marks</p>	Mean	17.6	Mode	17	Median	17.5	Range	4	3
Mean	17.6										
Mode	17										
Median	17.5										
Range	4										
04	6	<p>Which of the four measures shown in Question 04.5 do you feel is most useful for this enquiry? Give one reason for your choice.</p> <p>No credit for selection.</p> <p>Response needs to reflect the aim of the enquiry which is to consider whether the beach gets wider from west to east.</p> <p>In those terms:</p> <ul style="list-style-type: none">• the mean may have some use if compared with the measurements at either end of the beach• the mean considers all values• the range can be used to identify an increase or change• mode might be useful because many measurements are the same. <p>Credit other valid reasons. No credit for definition of terms</p> <p>AO4 (1a) – 1 mark</p>	1								
04	7	<p>Suggest a conclusion that the students might draw in relation to the original hypothesis.</p> <p>1st mark for some understanding that the data tends to prove the hypothesis (the beach gets wider from west to east/the hypothesis is supported by the evidence)</p> <p>2nd mark for some development which might include:</p> <ul style="list-style-type: none">• comparative use of data (west –east). Accept 3 or 4 metre increase.• identification of anomalies/outliers (an increase overall, but not consistent) <p>No credit for explanation of why beach gets wider (longshore drift)</p> <p>AO3 (1a) – 2 marks</p>	2								

04	8	<p>Which area shown in Figure 6 has the highest residential quality?</p> <p>Use the data in Figure 6 to justify your decision.</p> <table><tr><th>Level</th><th>Marks</th><th>Description</th></tr><tr><td>2 (Clear)</td><td>3–4</td><td>AO3 – Demonstrates clear analysis of the data (Figure 6) in reaching a judgement about which area has the highest residential quality. AO4 – Clear manipulation/use of data (calculation of totals/range of data) to reach a conclusion.</td></tr><tr><td>1 (Basic)</td><td>1–2</td><td>AO3 – Demonstrates limited analysis of the data (Figure 6) and makes a superficial judgement about which area has the highest residential quality. AO4 – Some reference to the data in Figure 4. Limited evidence of data manipulation.</td></tr><tr><td></td><td>0</td><td>No relevant content.</td></tr></table> <p>Level 2 (Clear) - Uses the data to make a reasoned judgement with some reference to the overall scores and individual categories.</p> <p>Max 3 marks if no use of numerical data.</p> <p>Level 1 (Basic) - Makes a judgement based on overall score AND/OR individual category.</p> <p>Totals</p> <p>A – 22 B - 26 C – 36 D – 35 (C and D appear to have the highest quality)</p> <p>Credit data total if shown at the bottom of the table.</p> <p><u>Indicative content</u></p> <ul style="list-style-type: none">• There are significant differences in the total scores which suggest that residential quality varies.• There are variations within the selected categories.• The categories have equal weighting which may make the overall score unreliable.• Area C and D have similar scores but significant variations within the data.• Some aspects identified may be more significant in relation to residential quality.• Different types of residents may view certain aspects as more or less important.• There are always aspects about perception and personal preference in relation to this type of survey. <p>AO3 (1b) – 2 marks, AO4 (1c) – 2 marks</p>	Level	Marks	Description	2 (Clear)	3–4	AO3 – Demonstrates clear analysis of the data (Figure 6) in reaching a judgement about which area has the highest residential quality.
