Mark Scheme Results

Summer 2022

Pearson Edexcel GCSE In Combined Science (1SC0) Paper 1PH

## Pearson: helping people progress, everywhere

Pearson aspires to be the world's leading learning company. Our aim is to help everyone progress in their lives through education. We believe in every kind of learning, for all kinds of people, wherever they are in the world. We've been involved in education for over 150 years, and by working across 70 countries, in 100 languages, we have built an international reputation for our commitment to high standards and raising achievement through innovation in education. Find out more about how we can help you and your students at: www.pearson.com/uk

- All candidates must receive the same treatment. Examiners must mark the first candidate in exactly the same way as they mark the last.
- Mark schemes should be applied positively. Candidates must be rewarded for what they have shown they can do rather than penalised for omissions.
- Examiners should mark according to the mark scheme not according to their perception of where the grade boundaries may lie.
- There is no ceiling on achievement. All marks on the mark scheme should be used appropriately.
- All the marks on the mark scheme are designed to be awarded. Examiners should always award full marks if deserved, i.e. if the answer matches the mark scheme. Examiners should also be prepared to award zero marks if the candidate's response is not worthy of credit according to the mark scheme.
- Where some judgement is required, mark schemes will provide the principles by which marks will be awarded and exemplification may be limited.
- When examiners are in doubt regarding the application of the mark scheme to a candidate's response, the team leader must be consulted.
- Crossed out work should be marked UNLESS the candidate has replaced it with an alternative response.

Mark schemes have been developed so that the rubrics of each mark scheme reflects the characteristics of the skills within the AO being targeted and the requirements of the command word. So for example the command word 'Explain' requires an identification of a point and then reasoning/justification of the point.
Explain questions can be asked across all AOs. The distinction comes whether the identification is via a judgment made to reach a conclusion, or, making a point through application of knowledge to reason/justify the point made through application of understanding. It is the combination and linkage of the marking points that is needed to gain full marks.
When marking questions with a 'describe' or 'explain' command word, the detailed marking guidance below should be consulted to ensure consistency of marking.

| Assessment <br> Objective |  | Command Word |  |
| :--- | :--- | :--- | :--- |
| Strand | Element | Describe | Explain |
| AO1* | An answer that combines the <br> marking points to provide a <br> logical description | An explanation that links <br> identification of a point with <br> reasoning/justification(s) as <br> required |  |
| AO2 |  | An answer that combines the <br> marking points to provide a <br> logical description, showing <br> application of knowledge and <br> understanding | An explanation that links <br> identification of a point (by <br> applying knowledge) with <br> reasoning/justification <br> (application of understanding) |
| AO3 | 1 a and <br> $1 b$ | An answer that combines points <br> of interpretation/evaluation to <br> provide a logical description |  |
| AO3 | 2a and <br> 2b |  | An explanation that combines <br> identification via a judgment to <br> reach a conclusion via <br> justification/reasoning |
| AO3 | 3a | An answer that combines the <br> marking points to provide a <br> logical description of the <br> plan/method/experiment |  |
| AO3 | 3b |  | An explanation that combines <br> identifying an improvement of <br> the experimental procedure <br> with a linked <br> justification/reasoning |

[^0]| Question <br> Number | Answer | Mark |
| :--- | :--- | :--- |
| 1(a) | B. when there are energy transfers, the total energy <br> does not change | (1) <br> AO1 |
|  | A is not correct because the total energy does not reduce |  |
| C is not correct because the total energy does not reduce |  |  |
| D is not correct because the total energy does not increase |  |  |

| Question Number | Answer | Additional guidance | Mark |
| :---: | :---: | :---: | :---: |
| 1(b)(i) | a diagram showing: <br> apparatus labelled to include three from <br> - thermometer <br> - water <br> - insulator / sand / sawdust / material <br> - (copper) can <br> thermometer in the water (1) <br> arrangement for water and insulator in and between copper cans (e.g. as in diagram below) (1) | independent of arrangement <br> ignore kettle and stop clock <br> accept reverse positions for water and insulator | $\begin{array}{\|l\|} \hline \text { (3) } \\ \text { AO2 } \end{array}$ |

| Question <br> Number | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| 1(b)(ii) | any three factors from: <br> \{mass / volume\} of water (1) | accept amount / specified <br> values / "how much" | AO3 |
|  | \{volume / thickness / mass\} <br> of insulators / materials (1) | accept amount / specified <br> values / "how much" | \{starting / initial\} temperature <br> of water (1) |
| accept temperature of hot / <br> boiling water / specified <br> values | time interval / temperature <br> change (1) | accept specified values of <br> interval or change <br> unqualified "same time" is <br> insufficient |  |

|  | Answer | Additional guidance | Mark |
| :---: | :---: | :---: | :---: |
| 1(c) | a description giving <br> as the density (of expanded polystyrene) increases the (thermal) conductivity decreases <br> non-linear / <br> gradient decreases / <br> at a decreasing rate / <br> levels off / <br> plateaus / <br> becomes (almost) constant | ORA <br> allow inversely proportional / exponential for non-linear in this context <br> ignore negative correlation <br> unqualified quoted values are insufficient | $\begin{gathered} \text { (2) } \\ \text { AO2 } \end{gathered}$ |

|  | Answer | Additional guidance | Mark |
| :---: | :---: | :---: | :---: |
| 5(b)(i) | reading from graph (1) <br> (at 5 degrees:) number between $10^{6}$ and $10^{7}$ <br> AND <br> (at 100 degrees:) $10^{2}$ <br> evaluation (1) <br> $\frac{\text { number between } 10^{6} \text { and } 10^{7}}{10^{2}}$ <br> OR <br> between $10^{4}: 1$ and $10^{5}: 1$ <br> between $10000: 1$ and 100 000:1 <br> OR <br> between $10^{4}$ and $10^{5}$ <br> between 10000 and 100000 | (e.g. $10^{6.5}$ ) <br> (e.g. $10^{4.5}: 1$ or $10^{7}: 10^{2}$ ) allow any correct ratio not in its simplest form <br> (e.g. 104.5) <br> award full marks for correct answer without working <br> inverted ratio scores 1 mark maximum | $\begin{gathered} \text { (2) } \\ \text { AO2 } \end{gathered}$ |
|  | Answer | Additional guidance | Mark |
| :---: | :---: | :---: | :---: |
| 5(b)(ii) | an explanation including any four from: <br> Observations <br> most (alpha particles) pass (straight) through the foil (with little deflection) (1) <br> some (alpha particles) are \{scattered / deflected\} through \{small angles / less than 90 degrees (1) <br> (very) few (alpha particles) are \{scattered / deflected\} through \{large angles / greater than 90 degrees\} (1) <br> Conclusions <br> atoms are mainly empty space (1) <br> there must be a nucleus / something inside the atom (1) <br> (nucleus / something) must be \{small / heavy / dense / concentrated / charged / positive\} (1) | Ignore electrons <br> ignore refracted allow repelled <br> allow rebound / reflect / back scattering / bounce back <br> ignore electrons | (4) A01,A03 |
|  | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| 5(c)(i) | A description including: <br> roll / release / drop a marble (down <br> the slope) (1) <br> and one from <br> record where the marbles go (1) <br> OR | (2) <br> allow alpha particle for <br> marble <br> recording | AO3 |
| measure the angle of path (1) |  |  |  |
|  | Answer | Additional guidance | Mark |
| :--- | :--- | :--- | :--- |
| 5(c)(ii) | any one from <br> marble / weight has no charge (1) <br> the edge of the paper is not far <br> enough away from the weight (1) <br> the marble / weight is too big / small <br> (1) <br> there is only one marble / weight (1) <br> it is 2 dimensional / not 3D (1) <br> all marbles have the same speed (1) <br> marbles (only deflect on) hitting / <br> contact with weight (1) | (1) | A03 |
| Question <br> Number | Answer | Mark |
| :--- | :--- | ---: |
| $\mathbf{6 a}$ | B frequency increases | A is not correct because the danger does not increase with |
| decreasing frequency |  |  |
| C is not correct because all waves in the e-m spectrum |  |  |
| have the same velocity |  |  |
| Dis not correct because all waves in the e-m spectrum |  |  |
| have the same velocity |  |  |$\quad\left\{\begin{array}{l} \\
\hline\end{array}\right.$
| Question Number | Answer | Additional guidance | Mark |
| :---: | :---: | :---: | :---: |
| 6b(i) | selection and substitution (1) $\begin{aligned} & 3(.00) \times 10^{8}=2.45\left(\times 10^{9}\right) \times \lambda \\ & \text { rearrangement }(1) \\ & (\lambda=) \frac{3(.00) \times 10^{8}}{2.45\left(\times 10^{9}\right)} \\ & \text { evaluation }(1) \\ & 0.12(\mathrm{~m}) \end{aligned}$ | allow substitution and rearrangement in either order $2.45\left(\times 10^{9}\right)=\frac{3(.00) \times 10^{8}}{\lambda}$ $\lambda=\frac{v}{f}$ <br> accept 0.122 (m) <br> power of ten error gains 2 marks <br> award full marks for the correct answer without working | $\begin{array}{r} \text { (3) } \\ \text { AO2 } \end{array}$ |
| Question Number | Answer | Additional guidance | Mark |
| :---: | :---: | :---: | :---: |
| 6b(ii) | selection and substitution (1) ```(0.)55=}\frac{42000}{\mathrm{ total energy supplied (to device)} rearrangement (1) (total energy supplied to device=)}\frac{42000}{(0.)55 evaluation (1) 76 000(J)``` | allow substitution <br> and rearrangement in either order <br> (0.) $55=\frac{42000}{x}$ <br> accept any value that rounds to 76 000(J) <br> 760/764/763(J) <br> gains 2 marks <br> any other power of ten error gains 1 mark <br> award full marks for the correct answer without working | $\begin{gathered} \text { (3) } \\ \text { AO2 } \end{gathered}$ |
| Question number | Indicative content | Mark |
| :---: | :---: | :---: |
| 6c | Answers will be credited according to candidate's deployment of knowledge and understanding of the material in relation to the qualities and skills outlined in the generic mark scheme. <br> The indicative content below is not prescriptive, and candidates are not required to include all the material which is indicated as relevant. Additional content included in the response must be scientific and relevant. <br> AO1 <br> Comparison <br> X-rays: high frequency / short wavelength / ionising / high energy <br> Radio waves: low frequency / long wavelength / not ionising / low energy <br> $X$ ray are used <br> - in medical diagnosis, to find broken bones, damage to lungs <br> - radiotherapy <br> - treatment of cancer <br> - airport security <br> - revealing counterfeit art <br> X-rays are emitted when electrons change energy levels because <br> - electrons in lower energy levels can absorb energy <br> - the electrons move to higher energy levels <br> - when the electrons return to a lower energy level <br> - the electrons lose energy as radiation. <br> - the electrons need to lose a large amount of energy <br> - (so that) they emit x-ray radiation of high energy/frequency <br> Radio waves are used <br> - broadcasting television <br> - broadcasting radio <br> - communications <br> - satellite transmissions <br> - mobile phones <br> - radar | (6) AO1 |
|  | Radio-waves are emitted when <br> - electrons oscillate in electrical circuits oscillations are <br> - current (flow of electrons) that continually change direction <br> - current flows up and down in a (transmitting) aerial <br> - alternating current (AC) <br> - this generates radio waves in the air around the aerial <br> - the frequency of the radio waves corresponds to the oscillation frequency <br> N.B. No credit is given for: <br> Electrons within an atom go through energy changes <br> OR <br> Radio waves are produced in electrons in circuits These phrases are in the stem of the question |  |
| :---: | :---: | :---: |
| Level | Mark | Descriptor |
| :--- | :--- | :--- |
| Level 1 | 0 | $1-2$ |
| Level 2 | $3-4$Demonstrates elements of physics understanding, some of <br> which is inaccurate. Understanding of scientific, enquiry, <br> techniques and procedures lacks detail. (AO1) <br> Presents a description which is not logically ordered and with <br> significant gaps. (AO1) |  |
| Level 3 | $5-$Demonstrates physics understanding, which is mostly <br> relevant but may include some inaccuracies. Understanding <br> of scientific ideas, enquiry, techniques and procedures is not <br> fully detailed and/or developed. (AO1) <br> Presents a description of the procedure that has a structure <br> which is mostly clear, coherent and logical with minor steps <br> missing. (AO1) |  | | Demonstrates accurate and relevant physics understanding |
| :--- |
| throughout. Understanding of the scientific ideas, enquiry, |
| techniques and procedures is detailed and fully developed. |
| (AO1) |
| Level | Mark | Additional Guidance | General additional guidance - the <br> decisions within levels |
| :--- | :--- | :--- | :--- |
| Level 1 | $1-2$ | e.g. - At each level as well as content, the <br> scientific coherency of what is stated will <br> help place the answer at the top or bottom <br> of that level |  |
| Elements of physics present i.e. isolated |  |  |  |
| knowledge of principles, two |  |  |  |
| unconnected statements |  |  |  |$\quad$| No rewardable material | any use of $X$ rays |
| :--- | :--- |
| Levy use of radio waves |  |

Total for Question $6=13$

[^0]:    *there will be situations where an AO1 question will include elements of recall of knowledge directly from the specification (up to a maximum of 15\%). These will be identified by an asterisk in the mark scheme.
